SWEETWATER TRAIL WELL RECEIVED

TWO PERFORMANCES GIVEN

A full house greeted the C.D.S. players last Monday night, when in aid of funds for the United Church, they presented the three act comedy, Sweetwater Trail.

The capacity of the hall proving inadequate, it was deemed necessary to give a repeat performance, Tuesday night, and a satisfactory attendance was also evident at the second showing.

Unless Vera Randolph is married by midnight of the day before her 24th birthday she must forfeit a large estate left to her in a freak will. Jeff Benson whom she is planning to marry is a black sheep, and will receive all the property should Vera fail to comply with the terms of the will.

At the eleventh hour the groom elect exhibits his natural cadishness, and Vera breaks off the engagement, only to discover that Benson had not intended to marry her anyway. Furious at being doublecrossed, Vera digs up another bridegroom, a young rancher "Marlow" from up Sweetwater Trail, and marries just before midnight.

Benson is furious at being outwitted, and does everything he can to discredit Marlow in Vera's eyes, and causes a coolness to come between them. Marlow fights Benson at every step, and bad blood between the two men culminates in an apparently fatal quarrel, but a sudden surprising twist in the action turns a would-be tragic ending into comedy, and all ended well.

As Gabby Lou, Lewis Lennan was made to order, and on this his initial appearance, he was a huge success.

Jean Stevens gave a superb performance as Pomona the hard boiled servant girl.

Making number three in a good comedy trio, Fred Baker as Jo the cook, as ever was excellent.

Margaret Murdoch as the charming young widow gave a finished performance that left nothing to be desired, and her co-partner Glen Williams, also contributed much to the success of the production in the role of O'Rourke.

Another newcomer Mary Murdoch as the Indian girl, was very effective, and shows great promise for future plays.

Edith Seville and her young rancher George McLean both played convincingly and exhibited good stage presence.

Les Spivey as Colonel Randolph and Antin Whillans as J. F. Benson were both highly satisfactory in their different roles.

In the lesser roles of bridesmaids Anne Cameron and Eva MacLachlan were very charming, and Max Grant as Sergt. McCallum filled his part very smartly.

After the performances the cast and staff were royally entertained by the Ladies Aid.

The executive staff are also deserving of praise for their share of the work.

CHAUTAUQU GLEAMS

How do you do!
Mr. Editor and folks.

Yes, after being snowed in at the Artic for several months, I am here once again to bring you the "gleams" and hope this column will be as interesting as last year.

Not having got into harness yet can't say much except play practice has started and all participants enthusiastic, so next week, keep an eye on this column, for the latest dope on the second local Chautauqua bigger and better than before.

As Tom Tredaway says if the Board of Trade is for it, then it's a good thing, don't be misled, save your pennies for April 4 and 5.

M. N. Underhill has bought the Harry Chatham quarter section, north-east of town.

RECEPTION FOR NEWLYWEDS

Raymond Gilchrist, son of Mr. and Mrs. J. R. Gilchrist, of Barons, Alberta, was united in marriage to Miss Nople Evila Greeno, of New Dayton, Alta. The happy event took place at Lethbridge on March 2nd.

Mr. and Mrs. Gilchrist have been spending their honeymoon at Calgary and Carstairs, and will arrive in Crossfield today (Thursday) where they will be the guests of honor at a public reception in the U.F.A. hall tonight. The event will take the form of an entertainment, presentation and dance.

Raymond is a native of Crossfield, and as the function is open to the public, a large crowd is expected.

The Chronicle joins with the people of this community in wishing Ray and his bride every prosperity, and also all the trials and tribulations that go with a "for better or for worse" proposition of this nature.

MEETING TO ORGANIZE FIRE BRIGADE

A meeting of citizens will be held at the Fire Hall on Monday night, March 11th at 8:00 o'clock, for the purpose of organizing a Volunteer Fire Brigade. All interested are asked to attend.

Only three other than the Council attended the meeting called for this purpose on Wednesday night. If the citizens are not interested, then there is nothing the Council can do.

Provincial Legislature Invites Mr. Aberhart

Edmonton, March 6—Without a division, the Legislature on Tuesday night adopted the resolution moved by D. M. Duggan, provincial Conservative leader, to invite William Aberhart of Calgary to come to Edmonton "for the purpose of preparing and submitting a comprehensive social credit plan for consideration of this legislature."

Local News

Old man Winter is paying his farewell visit, and let it be short.

Tom Tredaway is laid up with an attack of the flu.

"Dad" R. G. Gibson is ill at his home here.

Have you paid for your Chronicle. If not, why not?

Mrs. Clyde Whyte of Carstairs is visiting friends in town today.

Dr. Whillans states that it will be warmer tomorrow (Friday.)

Several rinks of lady curlers from Carstairs are to play here on Friday afternoon.

An old-timers picnic will be held during the coming summer.

Crossfield's annual Community Sale will be held in March. List what you have for sale now at the Chronicle office.

W. A. Hurt has disposed of three carloads of Elephant Brand Fertilizer, one carload has already been unloaded.

While a number of fight fans were attending the boxing bout at Carstairs on Tuesday night, thieves got away with several spare tires from their cars parked near the hall.

Constable Cameron phoned to Calgary and the police there arrested the two culprits as they drove into Calgary with the loot. They were remanded for trial until Wed. next.

The Carstairs - Crossfield Community Band entertained a number of their Crossfield friends at a Social evening in the C.D.S. rooms on March 6. The band played several selections, and then served a very tasty lunch.

Mr. Swanson's challenge appearing elsewhere in this issue, should be accepted by some one of the Social Credit speakers, and then the public will be able to find out just what is what.

The Brighter Side

For the past five years the people of Canada in common with those of other countries have been looking at the dark side of things, and during these years the picture at which they have been looking has become progressively darker and more gloomy. In fact, following the stock market crash in the late months of 1929, people generally did not seek to find any rays of light, they became more and more fearful, and preferred to dwell upon every unfavorable factor in the situation and to close their eyes and refuse to see anything that could be regarded as hopeful.

This state of mind spread throughout the whole country and, unfortunately for Western Canada, it was accentuated by reason of the advent of a cycle of abnormally dry years, accompanied by other climatic conditions, with their aftermath of pests and other drawbacks entirely beyond the control of man, and all discouraging and destructive of confidence on the part of people so grievously afflicted.

Under the circumstances the amazing thing is that people, taken on the whole, have displayed such wonderful fortitude, so much courage and such fine patience.

Within recent months the clouds of depression have been thinning, conditions have been slowly improving, and the time has come when, we think, the people of Canada may well, to their own advantage and further encouragement, take a look at some of the brighter things in our national life for which they have deep reason for thankfulness in comparison with the lot of other peoples and nations.

Unlike quite a few nations, Canada has maintained its national honor, has not repudiated but has met its national obligations. As a result, Canada stands higher than ever in the estimation of the world. It is a great asset that has not decreased in value but has been substantially increased, and that increased value will stand this Dominion in good stead in the years that lie ahead.

The general business situation in Canada is improving. In view of the economic depth to which the whole world had sunk, this improvement will naturally be slow at first, but it is gathering momentum and volume. The trade of Canada, both import and export, and internal as well, is increasing; the volume of business is becoming larger; railway revenues are rising; national revenues are substantially larger and are increasing. All of which means more employment in the not distant future, and especially so if action is taken to remove or materially lessen the many restrictions now imposed on trade.

Another bright side to the Canadian picture is to be found in the fact that, despite all the difficulties and problems, worries and sufferings of the people, Canada has been remarkably free of riots and other forms of defiance of the law which have characterized other lands and resulted in open strife and bloodshed. The Canadian people have kept their heads, and as a result they are winning through, just as the people of Britain are winning through.

Considering the past, the present and the future, there is another and very large and important spot of brightness, leading to hope and confidence for the future, in the fact that almost alone among the nations of the world Canada has been free and is free of the one great burden which rests with crushing force upon the world to-day. That is the burden of armaments—the enormous cost of warlike preparations. While other nations are paying annual tribute reckoned in hundreds of millions, even billions of dollars, to the great war god Mars, the Canadian people are not called upon to do so.

A couple of small destroyers, one on either seacoast, and a handful of militia which is merely a reserve to the established police forces of the country to assist if and when necessary in the maintenance of peace within our own borders, but in no sense an army maintained for offense against any nation—that is all. With no great battleships, no standing army, no great line of fortifications, Canada lives at peace with the world, the friend of every nation, having no quarrel with any.

If this picture was otherwise, if the Canadian people were taxed to the limit, as other peoples are, to provide for a great war with the machinery and equipment of wholesale human destruction, then Canada might have cause to fear for the future. Fortunately, that fear does not exist.

Given a return to more normal conditions, and therefore favorable climatic conditions imposed upon the commercial transactions and business life of the country—both of which conditions are not only possible but probable and are taken for granted—then the Canadian people without any undue optimism may well turn their eyes away from the darker picture of the past five years, and find renewed confidence and happiness in the brighter, better days now dawning.

Magic Of Science

Electric Lung Restores Speech To Person Without Voice

An electric "lung" and a pair of magnetic handuffs, both new, have come out of the scientific magic box of the Bell laboratories.

They were shown at a meeting of the University of Michigan Club of New York by Dr. Sergius P. Grice, vice-president of the laboratories. The lung substitutes electric current for air to make vocal sounds in the artificial larynx, which the laboratories invented to restore speech to about 1,000 persons in the United States who have lost their vocal cords.

The new instrument is placed in the mouth, much like a pipe. It pours into the mouth a pure tone which becomes intelligible speech merely by movement of mouth, lips and tongue in ordinary conversational manner. The voiceless person uses a pocket battery little bigger than a deck of cards. He puts a "pipe" in his mouth. He presses a button and the sound continues as long as he holds this switch closed.

The magnetic handuffs demonstrate the super-magnetic power of a new alloy which possesses 20 times the attraction of pure iron. With a cut on each wrist, or held on each hand, the chain between is joined by placing together two flat pieces of the new metal.

The most powerful man cannot pull these plates apart.

WHY HIS HEADACHES CEASED

Wife Put Kruschen In His Coffee

He could not understand why the headaches he had been subject to suddenly ceased. His wife told him, and he once sat down and wrote the following letter—

"I am 62 years of age, and ever since I was a boy of ten years, I was subject to very bad headaches. But two years ago the headaches stopped. I was surprised when one day my wife told me I had been using Kruschen salts in my coffee for over two years. I am still using them, as I know of nothing finer for the system."—J. T. Headaches can nearly always be traced to a disordered stomach, and to the unassisted retention in the system of stagnating waste material which poisons the blood. Remove these poisons—prevent them forming again—and you'll never have to worry any more. And that is just how Kruschen Salts brings swift and lasting relief from headaches. Kruschen Salts Nature to cleanse your body completely of all clogging waste matter.

Uses Special Board

Blind Player Is Having Luck At Monte Carlo

A blind gambler's luck is attracting the attention of visitors to the Casino at Monte Carlo, and some have found it profitable to follow his play.

Every day he arrives at the Casino alone and is escorted to his favorite place by one of the officials. He brings with him a special board covered with raised figures and on this he records the various numbers as they turn up.

His play is systematic without being sensationally high, but it is seldom that he gets up from the green table a loser. His identity remains a mystery. He knows little French.

Larks Damage Wheat

Farmers In England Have Started War On Songsters

Even if Shelley wrote an ode about it and Schubert was inspired by it to compose a beautiful melody, the lark is just a bird that damages wheat and other crops. So declare the farmers in the vicinity of Norfolk, England, and they have started a war on the songster. The Norfolk Agricultural Committee has concluded the bird from the new order under the Wild Birds Protection Act. Any one therefore may shoot it and have lark pie. "The skylark is a nice bird, but we can't live by listening to its music," said George Hewitt, an agricultural leader. The larks are said to invade England in flocks from Germany and Russia.

It was stated in London the British Poppy Day realized £11,000 more than in 1933, when the total was £511,853, the record collection being £524,950 in 1930.

The lobster chews its food before putting it into its mouth; a lot of external food choppers cut up the food before it is passed into the mouth proper.

DR. WERNET'S POWDER FOR HOLDING TIGHT

FALSE TEETH

Township That Is Unique

Adamsfield, Australia, Isolated Although Only 24 Miles From Railroad

There has been discovered to the world a township in Tasmania, Australia, which is unique, at any rate, in the southern hemisphere.

It has no hotel, there is no church, no weddings have been held there, there is no clergyman, and the town is under the control of a vigilance committee.

The township is that of Adamsfield, less than 70 miles as the crow flies from Hobart, and only 24 miles from a railroad. From the railroad, however, the only means of communication is by horse.

Some of the residents have not "been out and"—that is, made the journey out to civilization—for years, and it is possible for the stray visitor who finds his way in to guess the year in which the womenfolk last did so, by the fashions they are following.

The vigilance committee is a real power and has come into being because of the rare visits of a policeman on a tour of inspection. The committee finds the main cause of public opinion is the most effective weapon it wields.

Recently an area of agricultural land was taken up 15 miles "in" from Adamsfield, and every item of supplies had to be taken in on men's shoulders.

Nationalistic Policy

Sir Josiah Stamp Believes U.S. Policy Does Not Fit Needs

Sir Josiah Stamp, famed economist, in a speech before the American Chamber of Commerce said the United States "is pursuing a highly centralized nationalistic policy which is ill-fitted to the needs of closely knit world trade improvement."

The NRA codes, he said, "have not paid very great attention to the international factors and the uncertain condition in America has been brought about by codes. The piecemeal treatment of the problem, national by nation, is wrong. It is unnatural for trade to be balanced between two nations. It is more important that trade with all countries be treated as a whole."

Sir Josiah stressed the importance of currency stabilization and said, "if it was known the United States were going to devalue another 10 per cent, it would help matters greatly."

Rather Hard Luck

Seventy-year-old Thomas Dresser has instituted proceedings to bring himself back to life. When he walked with his frayed bank book into a Victoria bank the other day he was surprised to find that he could not draw on his account for the reason that he was "dead." He had been declared dead by the Supreme Court of British Columbia and his estate had been ordered to be divided among his relatives.

Wants Tariff On Ice Cream

The Bermuda Board of Agriculture has recommended protective duties on ice cream and the raw materials thereof. The assembly referred the matter to its finance committee for investigation. The local dairy industry suffered, it was pointed out, because during 1933 there were 512 gallons of milk and cream imported from Canada, and 22,667 gallons from the United States.

Little Journeys In Science

ACETYLENE

(By Gordon H. Guest, M.A.)

Acetylene is a colorless gas produced by the action of water on carbide. It is prepared in large quantities for use as an illuminant and as a source of great heat. When heated it decomposes into hydrogen and carbon. It was by this method that the Germans prepared much of the hydrogen used for filling the Zeppelins in the World War.

When compressed in cylinders, acetylene is very explosive, since the heat produced in compressing the gas is sufficient to start decomposition. However, scientists have found that acetylene can be compressed with safety by forcing it at low temperatures into steel cylinders completely filled with some porous material which has been soaked in a liquid called acetone. The gas is very soluble in this liquid and under such conditions it is not explosive.

The chief use of acetylene is in the cutting and welding of metals. For this work the gas is burned in pure oxygen in an apparatus known as the oxyacetylene blowpipe. A temperature of about 4,500 degrees Fahrenheit may be obtained in this way. In taking from structures apart the tip of the flame is held in contact with some part of the metal, until the metal is heated to a high temperature. Then the flame is turned on and the hot metal at once commences to burn away. By moving the tip of the flame containing the metal, the metal is cut into pieces.

Recently Langmuir, an American scientist, has invented a device known as the hydrogen-arc welding torch by means of which very high temperatures can be obtained. In this type of blowpipe a stream of hydrogen is conducted from a small tube through a series of electrodes maintained between tungsten electrodes. A temperature of at least 10,000 degrees Fahrenheit may be reached with this new torch.

GARDENING

Gordon L. Smith

Planting Nursery Stock

The proper time to plant perennials, roses, fruit trees, shrubbery and other kinds of nursery stock is just as root growth begins to be worked. But of course they must be purchased first. There is a vast range in prices and quality. Only shrubs and trees that are in good condition should be considered. This means that the stems and bark will be pliable and green, and there will be plenty of good, live buds. There will be a good root growth, and this, as well as the foliage, will be moist. Each plant should be wrapped separately. Granted that good stock is obtained, the next thing is to get it planted as quickly as possible and with absolutely no exposure to the sun. If the ground is still until to plant, open the parcel, soak in water, and plant in a shaded place, covering the roots and most of the stems with earth firmly packed down. Leave here until permanent locations are ready.

Spring Pruning

Most pruning is done in late winter or early spring. It is not a difficult task, but it is usually essential with all sorts of shrubs, roses and both fruit and ornamental trees. Dead growth should be removed, though at this time of year it may be difficult to detect dying wood. The general idea is to let in light, encourage strong growth and also turn out a tree or shrub which is fairly symmetrical. With shrubbery, pruning of things that bloom late in the year, should be done early in the spring, but shrubs like the Spirea, which blossom in early summer, should not be touched with the knife until late in the season. Prunings are necessary with grape vines. If these are pruned in late spring, they will bleed freely. The work must be carried out before the sap starts to rise. Commercial grape men leave a mere skeleton each spring as the fruit is produced on new growth. Raspberries are borne on two-year-old canes only, so that after the crop has been harvested and the new canes well started, all old wood should be removed. Most of the ordinary roses are cut back severely after growth starts in the spring, and better results are obtained from old wood is removed in late summer after blooming is over. With flowering shrubs, the aim is to keep new vigorous growth coming on by the removal of weak stems and four-year-old wood. Pruning of trees is little pruning beyond shaping slightly, but after they have started to bear fruit considerable growth should be removed each spring, so that the light and air are distributed evenly through the whole tree.

BUILD UP THE BLOOD

Mr. G. W. Vollick of 14 Fayette St., Hamilton, Ont., said: "I have found Dr. Pierce's Golden Medical Discovery to be the best tonic to build up a weak and run-down system. I also regulated my digestion, improved my appetite and strength."

New size, tablets 50 cts., liquid \$1.00. Large size, tablets or liquid, \$1.75. Write to Dr. Pierce's Clinic, Buffalo, N. Y., for free medical advice.

Camel May Be Displaced

And now the motor car may displace the camel. By use of 15-ton transport units, recently tested over 10,000 miles in northern Australia, it appears adequate and cheap service can be provided in undeveloped areas, combined with economical road construction. The unit reduced the rates to the level of those charged for hauling by camel teams.

England is one of the greatest horse racing nations in the world with tracks all over the country.

University Of Alberta Develops A New Variety Of Wheat Said To Be Drouth Resistant

An Alberta product developed at the University of Alberta, a new variety of wheat will be given a real test this year when it is planted in field areas in the province's drouth districts of the south.

A cross between the famous Canadian Marquis wheat and Kestrel, an equally famed grain in the United States winter wheat belt, the new variety, originated by Dr. O. S. Aamodt, professor of genetics and plant breeding at the University of Alberta, has been named "Canus", a derivation of the two nations—Canada and the United States.

A bearded variety, a heritage from the winter wheat side of its ancestry, the new grain is reported to be drouth resistant and to give a higher yield than Marquis.

In tests conducted by the Dominion department of agriculture and the research council of Canada, "Canus" showed an average yield of 32.4 bushels to the acre.

Here are some of the attributes of the newly-developed wheat:

Resistance to drouth, foot rot and bunt, two vital diseases which have taken heavy toll in the west; Good stiffness and baking qualities. Dr. Aamodt's wheat has one disadvantage. It is not resistant to rust, but not a serious problem in this province as rust is seldom a menace to Alberta producers.

A report, issued to its members by the Alberta wheat pool, says: "The probability is that Canus will ultimately supplant Marquis over a considerable area of the plains region of western Canada. It will not invade areas where early ripening is required as it takes about the same time to reach maturity as does Marquis."

Ten bushels of the newly-developed Canus wheat will be distributed among farmers of central and southern Alberta this year, according to Dr. O. S. Aamodt, University of Alberta, originator of Canus. It will be the first time the wheat, on which Dr. Aamodt has worked 15 years has been given to farmers for seed.

Dr. Aamodt does not claim remarkable drouth-resisting strength for his new grain. It is mainly useful in its strength against rust and foot rot, he declares. The national research council, Ottawa, financed his experiments.

Another high grade wheat, said to be equal in quality to Reward and with possibly greater yield and having strong drouth resistance, is in the process of development by Dr. Aamodt and may be available in five years.

Origins Of Canadian Oats

Leading Varieties All Came From Outside The Dominion

The leading varieties of oats in Canada, unlike Canadian wheat, have all originated outside the Dominion, although certain Canadian varieties are gradually advancing to the premier positions. At the present time the most outstanding varieties of oats grown in Canada are Banner, Alaska, and Gopher, all of which have come from the United States, and Victory which was introduced from Sweden. Among other varieties is Legacy, a new promising originator of the Centre Experimental Farm at Ottawa, which has done particularly well in Northern Saskatchewan, Central and Northern Alberta, and in the Eastern Townships of Quebec. Cartier, a production of Macdonald College, Quebec, may eventually replace Alaska in Quebec province as the standard early oat for Eastern Canada, while reports over a period of years show that O.A.C. 72 and O.A.C. 144, from the Ontario Agricultural College, yield well, the former on the lighter and the latter on the heavier soils of Southwestern Ontario. Of other varieties, Anthony was introduced into Manitoba from the United States in 1900; Gold Raisin, of Swedish origin, does well in Eastern Canada, and White Cross, another from the United States, appears to be best adapted to Northern Alberta conditions.

Little Mildred was poking at something in the grass. Suddenly she said:

Mildred—"Oh, Mother dear, here is a little green snake."

Woman (very cautious)—"Keep away from it, darling. It might be as dangerous as a rye omelette."

Flier's eyes are used to manufacture the false eyelashes fashionable with women.

Planned By Julius Caesar

Giant Aqueduct Is Now Nearing Completion In Italy

Italy's giant new Apulian Aqueduct, which will supply 302 towns and villages with water, is nearing completion after 29 years of work. The main conduit will be one of the largest water conveyers in the world, and its length, with branches, will total 620 miles. Already 193 towns and villages are receiving supplies.

Each of the 2,500,000 inhabitants served by the aqueduct will have an average supply of 18 gallons a day. These people have hitherto had to rely on rainfall for supplies, there being a total absence of underground springs.

Signor Mussolini's government is thus completing a work which was first conceived by Julius Caesar, who also attempted the reclamation of the Pontine Marshes, in which two new towns have been built.

The main conduit of the Apulian Aqueduct is 152 miles long, and of this length 67 miles passes through tunnels. The reservoirs will total 155, of which 118 have already been completed and seven are now under construction. There will be 27 pumping stations, of which 23 are completed.

The cost of the aqueduct is estimated at about £11,150,000.

Brains Are Electrical

Scientists Not Certain Yet What Nerve Impulses Indicate

Brains are electrical, according to the recent discovery of a group of scientists who found that nerve impulses are electrical surges and that the largest travel to the brain in direct relation to outside stimuli. Besides these nerve impulses which flow into the brain there are regular surges flowing through the brain itself even in the absence of any stimulus. This was proved by a very delicate apparatus which is capable of amplifying electrical currents 1,000,000 times. When electrodes were attached to the skulls of the subjects the surges were transformed into audible clicks. Scientists have not yet found out what these brain surges indicate, but it is thought that they may be hooked up in some way with the brain's ability to receive and translate messages sent by the nerves.

Cathedral Has Ship's Bell

Also Two Other Gifts From British Warship Canterbury

When the British warship Canterbury was broken up some months ago the ship's bell was placed in Canterbury Cathedral. Two interesting seafaring gifts have now been added to it. One is a log-book, presented by Admiral Percy Royle. In this every seafarer records his service and rank and signs his name when he first strikes six bells in the cathedral. Each morning a seafarer "stands by" to strike six bells at 11 o'clock. The other gift is a model of the first H.M.S. Canterbury, built in 1744. This is placed above the ship's bell. It is presented in memory of Captain Graham Edwards who commanded the last ship of that name until his death in 1928.

Queer Names For Streets

Paris Lays Claim To Having Most Of Any City

Paris claims to have more queerly-named streets than any other city in the world. They include "Ash Trays Street," "The Street of the Bad Boy," "Good Children Street," "Fishing Cat Street," "Green Dog Street," and "White Peacock Street." Other streets are "Son-in-Law," "Hot Cat," "Lovely Leaves," "Windy Wheel," "Red Ball," "Big Bottle" and "Little Mugs." Besides queerly-named streets Paris has "English" streets. They include those bearing the names of King George V, Queen Victoria, Charles Dickens, Lord Byron, Isaac Newton and Captain Scott.

Arrangement Renewed

The government has renewed for another 15 months an arrangement under which the Dominion reimburses provincial workmen's compensation boards and employers of war pensioners having disability of 25 per cent. and more when the pensioners have met with industrial accidents. The arrangement covers also imperial veterans resident in Canada.

UNCLE SAM HOLED IN FOR ANOTHER WINTER!
—Talbur in the Washington Daily News.

A Valuable Discovery

Water Has Been Found In At Least Three Different Forms

Water has been found to exist in at least three forms by Doctors R. O. Gustavson and Humphrey G. Owen, of Denver University. This discovery is expected to be of great value to mankind. "Once regarded as one of the simplest and most familiar of substances, water has now been found in at least three different forms made from a new, heavier hydrogen atom than the traditionally accepted type. This discovery has led to still more important discoveries by studying certain properties of the new water and the new hydrogen. It is known that water resulting from melting ice is different from water resulting from condensing steam and that the melted ice type has more value for growing plants than other types. That is why flowers bloom so abundantly at the edge of snowbanks in our mountains."

It is asserted that at bridge a good deal depends on the player. And the player on a good deal.

Based On Measurements

Explanation Of Why Sun's Rays Hotter In Winter

The sun's rays reaching the earth are hotter in the winter than in the summer, if measurements in both seasons are made at the same altitude of the sun, according to Dr. Bernhard Haurwitz, research associate at the Blue Hill Meteorological Observatory, Harvard University, Cambridge, Mass.

Winter is a cold period, not because the sun's rays are cooler, but because there are so many fewer hours of sunlight in winter than in summer, and because the rays strike the earth at a lower angle on the average.

The fact that the sun's rays are hotter in winter is due to several causes, Dr. Haurwitz found. One is that the earth is nearer the sun at this season. Another is that water vapor is much less, which is important because water vapor absorbs a good deal of solar radiation. The third factor is that winter air is much clearer than summer air, and that dust in the summer air cuts off more of the sun's heat.

The SNAPSHOT GUILD BIRTHDAY PICTURES

It's never too early to start taking pictures of the babies and in later years they will prove to be one of your priceless possessions.

Too many parents look upon only this adventure, but you get all excited, let out a couple of whoops, gasp, laugh and probably scare the infant so thoroughly that he falls down and has to do it all over again. The chances are that you will not be prepared for that first step, or if you should happen to be holding the camera in your hand you will, in your excitement, probably have it turned the wrong direction and get an out-of-focus picture of your mid-section. But don't miss this moment of moments the next time. Have your camera and yourself ready for action.

There never seems to be enough of these baby pictures to go around, for there are grandmothers, aunts, cousins and friends in distant cities who are always looking forward to receiving a snapshot of the newly arrived commander of the "infantry."

There's always the "first time" for everything and this applies to thousands of events in a baby's life. There is the first time he discovers he has lost, and immediately decides in his own little mind that they are something good to eat. His first smile, and then that great moment when he reaches out with his chubby little arms and says, "Blaah," which is at once interpreted by the parents to mean "Daddy" or "Mummy," sometimes depending on who is governor of the household.

There was an expert substituted steel tweezers for bees, butterflies and other undiscriminating pollen splatters. He took pollen from the stinger of one cabbage flower and placed it on the tip of another.

International Trade Fighting Its Way Through A Maze Of Tariffs, Quotas And Exchange

FASHION FANCIES

NAUTICAL THEME AFFECTS TINY TOTS' NEEDS AND ISN'T THIS DRESS ADORABLE

By Ellen Worth

It's no simple! The fussiest falls softly from the shoulders through stitched plait that are released from about the normal waistline. The collar is the cutest ever. Nautical blue percale printed in white ring motifs, is sketched. The collar is white pique with its smart back closing accented by blue buttons.

Other nice suggestions for this dainty made model are striped or checked crepe, (that needs no ironing), Scotch plaided gingham, cotton radecloth, dimity print, etc.

Style No. 371 is designed for sizes 2, 4 and 6 years. Size 4 requires 1½ yards of 36-inch material with ½ yard of 18-inch contrasting. Patterns 20c each. Address mail orders to: Pattern Department, Winnipeg Newspaper Union, 175 McDermott Ave. E., Winnipeg. The Spring Fashion Magazine is better than ever. Entirely illustrated in color you will find it a very stimulating fashion edition. There are clothes for cruising and clothes to brighten the lives of stay-at-homes. Many delightful little models for the smaller members of the family. Of course, patterns are obtainable for the designs illustrated. Send for your copy to-day, the price is 20 cents.

Cancer Research

New Discovery Is Made In Relation To Use Of Radiation

The discovery of a mysterious substance which makes cancer cells more susceptible than healthy one to X-rays and radium rays was reported recently.

Physicians have long known cancer tissue is affected by radiation, more than sound flesh but the reason was believed to be that the rays stopped growth of the cells.

Experiments by Dr. Paul S. Henshaw of Memorial Hospital, New York, have apparently determined that the rays halt the workings of the strange substance that regulates not only growth in size but other development as well.

The studies by Dr. Henshaw were made public by the American Association for the Advancement of Science. Cancer specialists hope that from them may grow the knowledge of just how much radiation to apply to the diseased cells so the normal ones will not be harmed.

Odorless Cabbage

Cornell University Professor Develops A New Type

An odorless cabbage, something new in the vegetable world, was announced at Cornell University.

It took 4,000 cabbages and six years to produce it. Each year Professor C. H. Myers uprooted a few of the most sturdy early Savoy cabbages in the Cornell experimental gardens and placed them in cold storage for about two months. This gave the young cabbages a "rest."

There was an expert substituted steel tweezers for bees, butterflies and other undiscriminating pollen splatters. He took pollen from the stinger of one cabbage flower and placed it on the tip of another.

Gradually somewhat wearily, international trade is fighting its way through a world maze of skyscraper tariffs, quotas and exchange controls. British returns indicate that an ebbing tide has again begun to flow.

Progress is steady if slow. "The British trader," says the annual report of the London Steamship Owners' Association, "continues to be hampered over wide areas of the world by political disturbances, by currency and exchange difficulties and by quotas, tariffs and other restrictions on trading."

A glance over the European scene reveals a curious picture. While Premier Pierre Lalande of France talks of the need for free trade, countries of central Europe strengthen their exchange controls. Networks of trading agreements endeavor to beat past dams in the stream.

Old-time barter has returned. Germany is building locomotives against saltpeper from Chili. Soviet naphtha is bartered for Australian mutton. Spanish oranges and wine go for Irish eggs.

Seventeen ships are under construction in German yards for barter, some for whale oil. French railway stock has gone for Roumanian oil; Hungarian railcars for Egyptian cotton; Swiss cheese for Russian petrol.

Lithuanian geese are reported to have been offered for locomotives for Czechoslovakia. Live pigs were traded for a Polish automobile. Paris artists are selling pictures for values in kind.

The luckless traveller, as he traverses a constantly changing scene of currency controls, is never quite sure whether too many pounds, pence, marks or francs are not going to land him in jail.

Prince Has Keen Hearing

Beat Trained Men In Identifying Sounds From Trick Records

That the appearance of gray hair at his temples followed by the adoption of horn-rimmed spectacles, naturally, as was recently said in a London dispatch, makes the Prince of Wales look older. It has just been discovered, however, that his hearing is still abnormal. The other day they induced him to go down to a phonograph factory at Hayes, Middlesex, where a competition was being held to "read" the sounds given forth from trick records. The competitors were men trained to the identification of sounds, but H.R.H. beat them all; he identified the sound of the striking of a match, of a girl walking on high heels, the call of partridge, grouse and pheasant and various noises reproduced from those in London streets. He missed only one. "That is a waterfall," exclaimed the Prince after hearing one record. "Well, it wasn't a bad shot," he said, laughing, when told that it was a glass of water being poured out.

Early-Ripening Wheat

New Type Has Been Developed At Kansas State Agricultural College

A new type of wheat has been developed at Kansas State Agricultural College, and cereal chemists met at Kansas City to discuss what to do about it.

The question is whether the new grain shall be released for commercial production.

It has been named "Quivira" after the legendary city which drew Coronado across the Kansas plains in search of gold.

An early-ripening type of hard winter wheat, it was produced by crossing Prelue, a spring wheat of the north, with Kanred, hard winter wheat now used widely in the northwest.

French Veterans To Visit Canada Several hundred French war veterans will visit Canada next August, the association of ex-combatants announced. Visits will be made to Quebec and Montreal where groups of Canadian veterans, who saw service in France, will entertain the French party, which will also spend several days in New York as guests of the American Legion.

The lammergeier is the largest of European birds of prey, measuring 40 inches or more in length and from 8 to 10 feet in extent of wing.

The apricot is believed to be a native plant of Western and Central Asia.

HINDS Honey & Almond CREAM

WORLD HAPPENINGS
BRIEFLY TOLD

The Prince of Wales is to become a member of the Worshipful Company of Gardeners.

Madrid authorities reported that 1188 persons died in the city in the first three weeks of February of influenza.

A southern hemisphere wheat crop more than 14 per cent. below the average was predicted for 1935 by the United States bureau of agricultural economics.

Recent windstorms shook the grain out of thousands of acres of oats ready to be harvested in the district of Sea Lake, Australia, one farmer's 150 acres being thoroughly husked.

Canada produced 910,400 bushels of flax last year, according to a return tabled in the House of Commons. Of that volume 542,000 bushels were grown in Saskatchewan.

The annual convention of the Manitoba School Trustees' Association asked the Manitoba government to provide text books free in grades one to six inclusive.

Canada and the Union of South Africa were said to be the only countries free from the blight of foot and mouth disease, during an agricultural debate in the British House of Commons.

Prompt federal action to build a Peace River Railway outlet to the coast was demanded in a resolution adopted by the Alberta Legislature after discussion in which Liberal members played the provincial and federal governments.

Britain will continue to need Canadian wheat, notwithstanding recent extensive development of agriculture over there, Sir Francis Floud, high commissioner for His Majesty's government in the United Kingdom, told members of the Women's Canadian Club at Toronto.

Midnight Gold Rush

Discovery of Free Gold at Lake Athabasca Causes Excitement

Discovery of free gold in the Beaveridge field on Lake Athabasca, has led to wild excitement in the area, says a special radio despatch from Fort Chipewyan to the Edmonton Journal. Word of the discovery caused a wild midnight gold rush which left Beaveridge camp deserted half an hour after word of the find reached it.

The find was made by a St. Joseph's Point trapper, who brought in samples of rich ore and, on his return journey, discovered he was being followed through the darkness by 17 men anxious to stake near his find. The trapper, pretending he was lost, managed to throw his pursuers off the trail, then hurried to stake his claims.

Diamond drill cores from Consolidated Mining and Smelting Company claims at Beaveridge are reported to have shown rich deposits of gold lie 30 feet below the surface.

Banish Constipation Nature's way!

A Natural Corrective... doctors advise its use to get rid of Constipation

Take your doctors' advice! If you suffer from headaches, bad breath, sour stomach and other constipation ills... use Quaker Bran.

Remember, Quaker Bran is different from all prepared bran cereals. It is pure bran, uncooked—untreated—undiluted. For these reasons it is definitely richer in mineral and vitamin content.

Quaker Natural Bran works with nature to induce normal healthy bowel movement. It is safe, effective and gentle. And it saves you money because it allows you to dispense with costly drugs.

Serve Quaker Natural Bran with your regular cereal each morning. It is ideal for muffins, cookies, etc. A booklet of tested recipes and other delicious bran dishes is in every package.

QUAKER BRAN

Pure, Natural, packaged bran.

WHAT DOES YOUR HANDWRITING REVEAL?

By LAWRENCE HIBBERT
(Grapho-Analyst)
(All Rights Reserved)

(Editor's Note: An analysis from your handwriting will often provide an insight into latent characteristics that will change your entire life. The author makes an interesting offer following this week's article.)

This week's mail brought a rather poignant letter from a girl who lives in Winnipeg. I am reproducing it because you can read it and decide what you would do if you were in a similar position.

Dear Mr. Hibbert: I am bringing my problem to you because you have helped so many others, and it may be that you can shed a ray of hope in my own case. I have been going with a young man for some time, and there has been some time when I have been in a position where I should be married.

"Later, however, my friend has been going out with another girl, and I am wondering whether he has got tired of me. He tells me that he can't be of any help to him in his business, and that while he likes her as a friend, that is the only feeling he has for her, and that he still loves me.

"Now, Mr. Hibbert, I love my friend very much, and he seems to be an ideal companion, and I do trust him, but this affair has me worried, because he has not been out with anyone other than myself for a long time. Do you think it means that he is losing his love for me, and that I may lose him? I do wish you could help me, and I am sending his writing with this letter."

The writing of this girl shows that she is normally affectionate, maybe a trifle impulsive, and she is generous. She has simple and another girl for a change. He may have no intention of giving up my correspondence, but there is a real danger that he may develop a real interest in the other girl, and that will ripen into love.

His own writing is normal enough. He is not one of the amorous or the serious type, and he has no outstanding weaknesses, such as being deceptive or dishonest.

My advice to my correspondent is that she discourage the trait I have already mentioned. She should avoid anything in the nature of "carrying on" with her shoulders. She should strive to keep things on the old footing. It certainly will not help her to talk a lot about the other girl, and show her boy friend that she thinks she may lose him.

She should do everything she can to show him that he means a great deal to her. Do not take anything for granted.

No man likes to be nagged and the tendency shown in this girl's writing is rather like nagging. She may not know it, because so many people who have this unfortunate habit are really very kind. She has broken more romances and spoiled more marriages than probably any other single cause.

(Have you any problems in which you need advice? Do you wish to know what your friends are really like, and what are your own real characteristics? A personal analysis will help you a great deal. Send me your writing, and I will analyze it, and state briefly in each case, and enclose with it a stamped addressed envelope, to: Lawrence Hibbert, c/o Winnipeg News-Paper Union, 175 McDermott Ave., Winnipeg, Man. Letters are confidential, and replies will be forwarded as quickly as possible. Some delay is unavoidable, however, owing to the large number of letters that are coming in.)

Snow is beautiful to those who have no more to do with it than look at it.

A new disease of corn, which may become important, has been reported in Florida.

GET RID OF THE CROWS

(By JACK MINER)

My reason, dear reader, for writing this article is simply to encourage you to take more interest in our great out-of-doors and crowd study of the so-called wild creatures that occupy it. Yes, and to ask you to study them closer for yourself, since at the present day there are so many indoor naturalists writing and misreading the books on birds and animals, asking all classes of humans to take a deeper interest. When you are driving, walking, running or flying, keep both eyes open so as to gain more from personal observation, and when you see a crow perched and pecked by another bird, stop and ask yourself why? Surely they don't want to eat him. Then, why are they chasing him?

Jack Miner in the days of his youth.

Or you may see a killdeer or other species of bird fluttering and bobbing about from right near you. Immediately you are convinced that he is crippled or hurt, and he is not broken, since she keeps falling over herself every time she attempts to get away. Of course, you are going to catch her and see just what is wrong. But soon you find you can get just so close and no closer and when you have yourself out of breath you will get discouraged and stop. You will find the bird you are pursuing flying fairly well and in five times further from you than she was when you started. Now, please ask yourself why? But be careful when you start her, for you may step on her egg or one of her babies. Keep both eyes open and be convinced as to how these God-given creatures, in the majority of cases, take advantage of color protection.

For illustration: If it is a killdeer, she will have gathered pebbles, shells, bits of wood or fragments of anything of the color of her eggs, and placed them all around the nest. Remember this is the mother's doing, and when you see a ruffed grouse (Partridge) not over a few days' old, hide among leaves the color of itself, what do you call this? I simply call it God.

In the spring of 1879, which was the second year we were in Canada, I put in every Sunday hour in getting foxes, to keep them as pets. With axe in hand, I would scour the woods for miles around and I have heard something meowing and screaming, which sounded like an old Tom-cat making his last agonizing cry, and I would find a fox cub in the direction from which the sound came. When about one quarter of a mile away, the squalling usually ceased. Now I turned and if the noise took me straight north, I went back south from where I first heard it, keeping both eyes open for remnants of rabbits, ruffed grouse or turkey feathers, and in the majority of cases I would soon be using the axe to chop out the young foxes.

Sometime ago I read a nine page letter sent to me from a gentleman explaining that he was driving the Irish sparrow that was driving the barn and gave swallows out. But that the systematic control of house flies by the human race was robbing the swallows of their food and starving them out. Really, it was a beautifully written letter and if I did not know better, he might be induced to believe it. But the fact is, the English sparrow is the direct cause of the decrease of fully ninety per cent. of our barn and cave swallows. I haven't seen an cave swallow in Ontario for twenty-five or thirty years. In Alaska there are no English sparrows, but in July, 1925, I counted forty-seven occupied cave swallows' nests under the eaves of a building we stayed in while there. In other words, they are there now just the same as they were here in eastern America 50 years ago and would be here now were it not for the devilish, dominating ways of this imported, undesirable house sparrow, a dirty bird that doesn't do as much good in a year as a swallow will in a week.

Some years ago, I saw an article in a sporting paper stating that canvas-back ducks and Canada geese migrated at the rate of 120 miles per hour. One hundred and twenty miles per hour, or, in other words, two miles per minute! Say, I am from Missouri and you have got to show me! During the last ten years, I have been privileged to give this question a fair test and, on several occasions, when the wild geese have left my home for Hudson Bay, I have wired ahead of them. I wired to the C.P.R. agents at Strathol, Ontario, to cross over the bridge at Cochrane, Ontario, and in every case I received a reply. If those agents saw the same geese that left here, these birds were making between forty or fifty miles per hour. Another short but accurate test I have been making recently is as follows: My oldest son lives two miles south of me on a road running east, and west, the same as the one I live on. The wild geese that make their home with me at least five months of the year, all go out to Lake Erie to roost, returning early the next morning. Lake Erie is three miles south of my home. When I hear them honking and see them towering high before leaving the sanctuary getting ready to cross over the three miles of my man's land, I get my son on the telephone. As I say, he is two miles south of me, over the lake and the sanctuary. He holds the receiver with a watch in his hand, and just as a big distinguishable flock comes over the road at my house I call "Go." He marks the exact time, goes to the road and over the lake and the sanctuary coming. Here are the results of the last three tests: First, 2% of the flock, from three to five minutes, and eleven seconds. Second, 4% of the flock, from three to five minutes, and eleven seconds. Third, as they were facing quite a stiff breeze, four minutes. Remember, these birds are from three to five hundred feet high before they leave the sanctuary, therefore they are not doing climbing after they leave here.

Oh, but you sigh and say, "What has all this to do with Crows?" Nothing at all. I have only unraveled these experiences to encourage you to study for yourself.

The first hunting I did in Canada was in 1868, when I was 16 years old. We shot the crows because they pulled up our corn, and from boyhood up, whenever I was hunting, I studied its habits. Soon I found myself practicing to imitate the call of the crow, and I was causing the young crows' trouble; I would practice this quacking, carving and hooting in the early morning. Then I would let the echo from the forest speak for itself as to the perfection of the deception. Then I would conceal myself in the thick undergrowth of the woods, in any range of a few dead trees for Mr. Crow to perch on. I would then start giving these low delicate caws of distress, just the same as I heard the young crow utter, now and then giving the low hoot of the owl. Many of these black old nest-robbers have brought food or come to protect the wrong baby but, to my surprise, they were not feeding their young on corn. As I held these old birds up by the tail as they gasped their last gasp, I grew up bird's eggs. I have seen as high as seven unhatched robbers pour out of the mouth or throat of a dying crow, and the little bits of life were sometimes still squirming.

(To Be Continued.)

Recipes For This Week

(By Betty Barclay)

ORANGE MERINGUE CUSTARD

1½ cups (1 can) sweetened condensed milk
3 oranges
3 eggs
3 tablespoons granulated sugar
Blend sweetened condensed milk with diced pulp and juice of oranges. Add well-beaten egg yolks. Pour into buttered baking dish. Cover top with meringue and bake in water bath. Bake 15 minutes, or until meringue is brown, in a moderately slow oven (325 degrees F.). Serves six.

FRENCH COCOA BALLS

¾ cup cocoa
1½ cups confectioners' sugar
1 cup nut meats
1½ cup sweetened condensed milk
1 tablespoon vanilla
Mix ¾ cup cocoa and 1½ cups confectioners' sugar. Chop nut meats and add. Moisten with sweetened condensed milk and vanilla. Shape into balls. Combine remaining sugar and cocoa and roll balls in it. Makes three dozen.

PARA-SANI WAXED PAPER Get the Green Box Kept in your kitchen always. Inexpensive. Campbell PAPER PRODUCTS HAMILTON, ONTARIO

YOU CAN'T "KILL" COLDS

but you may Control them!

Don't run risks with so-called "cold-killers." It's so easy to upset the stomach and lower body resistance with constant internal dosing. For fewer and shorter colds—let Vicks Plan for Better Control of Colds help you and your family. It is safe and effective. Proved in thousands of clinical tests and in actual home use by millions.

To help PREVENT COLDS—VICKS VA-TRO-NOL

At the first sniff, sneeze or nasal irritation, apply a few drops of Vicks Va-tro-nol. Its timely use helps to avoid many annoying colds. (Full details of this tested Plan in each Vicks package)

To help SHORTEN A Cold—VICKS VAPORUB

If a cold has developed, apply Vaporub at bedtime. Its soothing action—all night long—gives soothing relief. Avoids "dozing." (Full details of this tested Plan in each Vicks package)

VICKS PLAN FOR BETTER CONTROL OF COLDS

SUNDAY SCHOOL LESSON

MARCH 10

PETER PREACHES TO GENTILES

Golden text: "God is no respecter of persons; but in every nation he that feareth him and worketh righteousness, is acceptable to him." Acts 10:34, 35.

Lesson: Acts 10:1 to 11:18; 15:8-11.

Devotional reading: Psalm 67:1-7.

Explanations And Comments

Peter's Sermon, verses 34-43. The declaration of the mission and the weightiness of Peter's message are indicated by the words which he used. "And Peter rose and said: 'Of a truth, I perceive that God is no respecter of persons; but in every nation he that feareth him, and worketh righteousness, is acceptable to him.' Moffatt's translation reads: 'I see quite plainly that God has no favorites, but that he who reverences him and lives a good life in any nation is welcomed by him.' To those Gentiles Peter preached the Christ, who is 'Lord of all,' in the Greek the word he is emphatic to show this, the words have been rendered, 'He, yes he, is Lord of all,' of the Master's life, and to win his allegiance to the Lord and Savior of mankind, for the Spirit of love and unity to be poured out upon both alike. The power which unites people of diverse racial tradition and language, and the power of the Spirit, Jew and Gentile, Englishman and African, bond and free, may become one in Christ." (R. H. Coats).

Starvation The Cure

When People Do Not Have Money To Buy Rich Foods Then Health Is Improved

In days of depression, general health is better than in days of opulence and fine living, several doctors told the House of Commons during a health debate. Dr. J. P. Howden (Lib., St. Boniface) said "starvation is the cure for many diseases" and it was because people did not have the money to buy rich foods that their health improved. And it was true, Dr. Howden added, that "many people dig their graves with their teeth."

Howden (Lib., St. Boniface) said "starvation is the cure for many diseases" and it was because people did not have the money to buy rich foods that their health improved. And it was true, Dr. Howden added, that "many people dig their graves with their teeth."

Starvation The Cure

When People Do Not Have Money To Buy Rich Foods Then Health Is Improved

The great clock in the tower of parliament building, London, formerly required the labor of two men, for six hours, three times a week, to keep it wound. An electric motor now does the work.

As a result of unrestricted access to the British market, Canadian bacon exports in 1934 increased 82 per cent. over 1933, while, under quota restrictions, Exports decreased 22 per cent. from 1933.

Alice—Why do they have knots on the ocean instead of miles.

Skipper—Well, you see, they couldn't have the ocean tide if there were no knots.

Architectural Toy

Proceeds Of World Tour Of Doll House To Be Donated To Hospitals

For Sick Children Colleen Moore's doll house—a 14-foot fairy castle with 11 rooms—will arrive in New York April 1 for its world premiere.

The architectural toy, built at a cost of \$455,000, will be taken on a world tour and the proceeds from exhibitions will be donated to hospitals for crippled children.

Built in scale of an inch to the foot, the doll's house contains these marvels:

A gold cathedral organ, 15 inches high, which plays music.

A feather nightgown operated by electricity.

Light bulbs the size of wheat grains.

A robot fairy princess who sings, answers questions and dances in a garden grotto.

A bible the size of a baby's thumb nail.

Colleen Moore said the doll's house was one of her childhood dreams.

Italy's largest automobile plant is working full time.

PROGRAM MAY EXTEND RADIO COAST TO COAST

Ottawa.—A construction program designed to give the national radio system complete coverage from coast to coast is contemplated by the Canadian radio commission, it was learned recently. The program, if ratified, would entail erection of new stations or increasing the power of existing stations in Nova Scotia, Montreal district, Toronto district to cover northern Ontario, Saskatchewan and British Columbia.

Action on the plans has been delayed, it was said, owing to lack of necessary funds. The program could be carried out, it is claimed, for something under \$1,000,000. With it would be associated a plan to extend hours of national broadcasting.

Execution of the commission's plans, it is contended, would overcome practically all difficulties and complaints now encountered in carrying on national radio in Canada.

The modern stations of reasonable power would be erected in various sections where coverage has been inadequate and from which complaints about radio conditions have come. Surveys show such areas exist particularly in the maritime provinces, a section of Quebec, a large part of Ontario, Saskatchewan, part of Alberta, and practically all the populated part of British Columbia.

With construction of new stations and extension of hours of national broadcasting, the national radio service would be provided at points where most of the principal commission programs are produced. It is said that while reports from listeners indicate increasing satisfaction with the national radio service, the service is injured by complaints arising out of poor reception conditions and inadequate coverage.

Commission plans regarding special reception and re-broadcasting of British programs were announced some time ago. The special short wave reception station at Ottawa on which these programs will be received is expected to be in operation soon.

To Repulse Air Attacks

Britain Would Utilize Recent Scientific Inventions

London.—Sir Philip Sassoon, under-secretary for air, announced in the House of Commons a decision to appoint a special committee to investigate the possibilities of countering air attacks by utilizing recent scientific inventions.

He said the decision was reached some months ago and that the committee was composed of Henry Tizard, rector of the Imperial College of Science and Technology, a chairman, Professor A. H. Hill of the Royal Society and P. M. S. Blackett, professor of physics at the University of London.

The committee's report will be presented to the imperial defence committee.

Hogs Are Hogs

But Those Produced In Canada Are Of Superior Type

Ottawa.—Hogs are hogs but some are better than others, believes Dr. Thomas Donnelly, liberal house member for Willow Bunch. In particular Canadian hogs are better than American hogs.

"The American hog is not the Canadian hog," said Dr. Donnelly. "He is not a bacon hog at all. He is a hard hog. He is not as good as our near Yorkshire bacon hogs." The western member was comparing farm prices in Canada and the United States and maintained good Canadian hogs brought a lower price than their inferior brothers south of the line.

Tourist Traffic Better

Ottawa.—Foreign automobile tourist traffic entering Canada during the past calendar year increased at most points, totalling 3,261,848 automobiles as against 3,096,887 automobiles entered in 1933, a gain of 164,961, according to a statement issued by Hon. R. C. Matthews, minister of national revenue.

Will Need Canada's Wheat
Toronto.—British will continue to need Canadian wheat, notwithstanding recent extensive development of agriculture over there, Sir Francis Floud, high commissioner for His Majesty's government in the United Kingdom, told members of the Women's Canadian Club here.

Imperial Press Conference

Vote Of Thanks Given To Major Astor Of London Times

Johannesburg.—The fifth Imperial conference concluded its sittings locally with a vote of thanks to Major J. J. Astor, chairman of the Times Publishing Company, of London, who acted as chairman. The vote was passed with all delegates standing and applauding Major Astor for two minutes.

It was stated deliberations were eminently successful. Agreement has been reached on formation of a London committee to co-ordinate the work of the Empire Press Union and to look for lower press cable and wireless rates.

The conference referred to the Empire Press Union for inclusion on the agenda of next year's meeting of the new annual committee in London, a resolution for lower postage rates on British newspapers and periodicals mailed to the Dominions and colonies.

Lack Of Fodder

Minnesota Man Brings Emaciated Animals To State Legislature As Exhibits

St. Paul.—Outside Minnesota's state legislature recently stood three emaciated animals—a horse, a cow and a pig—quietly munching feed their western Minnesota owner said he had been unable to give them at home because of inadequate rations following last summer's burning drought.

Inside the statehouse, the senate, although one of their number specifically denied the "exhibit" had influenced the action, promptly passed a measure to appropriate \$500,000 to be administered by the state executive council for livestock feed in western Minnesota drought areas.

The livestock was the property of Arthur Spencer, western Minnesota farmer, who engineered the one man "bony march."

Show Big Increase

Savings Deposits \$5,000,000 More Than In January 1934

Ottawa.—A decrease of \$12,000,000 in bank note circulation at the end of January compared with December and a drop of \$5,000,000 in central gold reserve deposits were shown in the monthly report of chartered banks to the department of finance as on Jan. 31, 1935.

Demand deposits were down \$45,000,000 from December but \$500,000, 000 greater than on the same date last year. Savings deposits increased \$5,000,000 in the month and \$62,000, 000 in the year. Call loans in Canada were down \$10,000,000 compared with the previous month while current loans were down \$18,000,000 from December and \$50,000,000 compared with Jan. 31, 1934.

Protest By Ethiopia

Desire A Peaceful Settlement Of Border Dispute

Rome.—Foreign office officials began drafting a response to the protest by Ethiopia against the continued sending of troops and munitions to Italian Somaliland.

The Ethiopian charge d'affaires, Negades Yessou, delivered the protest—a note to the Italian government from Emperor Haile Selassie—that "Italy could retire its last soldier and its last cannon from Italian Somaliland and Eritrea, and Ethiopia would not touch a single stone in these two colonies."

The African emperor's statement also reiterated his desires for a peaceful settlement of the border dispute.

Hughes War Resolution

After Warm Discussion Was Withdrawn In The Senate

Ottawa.—Warm discussion of the Hughes war resolution was followed by its withdrawal in the senate by its sponsor.

The resolution proposed, if Canada ever again entered war, she would wage it "with every ounce of her strength in man and material power," and that declaration of war should be followed immediately "by mobilization and conscription of all human power and all the material wealth of the nation."

Ask Free Text Books

Winnipeg.—The annual convention of the Manitoba School Trustees Association asked the Manitoba government to provide text books free in grades one to six inclusive. Education until the sixth grade was compulsory and text books should be provided, said the resolution adopted by the convention. 2088.

Disastrous Fire In Moscow

Explosion In Pencil Factory Kills Twenty-Nine Persons

Moscow.—Twenty-nine persons were killed in an explosion and fire which destroyed the Krasnaya pencil factory on the outskirts of Moscow. The loss of life in the disaster was not disclosed for three days, and after the bodies of the victims were cremated.

The fire started shortly before midnight. All of Moscow's fire apparatus called out to combat the flames battled three hours before they brought the fire under control. It was announced the factory and warehouse were a complete loss. Part of the workers thrown out of work by the fire had been sent on vacation. Others were absorbed by the Sacco-Vanzetti pencil factory, also in Moscow.

The explosion occurred in a high pressure compressor from causes not immediately determined. The blast sent a compressed air tank weighing one and one-half tons hurtling through two floors of the building and the roof. It crashed into the adjoining warehouse.

Fear Drouth Will Continue

Western States Still Dry In Weather Bureau Report

Washington.—Continuance of dry soil conditions over a large area in the western great plains, foreshadowing a possible return of drouth conditions in part of the area devastated last summer, was reported by the United States weather bureau in its weekly weather and crop bulletin.

Severe dust storms were experienced in the western portions of Oklahoma, Kansas, Nebraska and parts of eastern Colorado and eastern Wyoming.

Weather bureau officials said dust storms were occurring much earlier than usual.

SIR JOHN SIMON MAY VISIT RUSSIA TO TALK PEACE

London.—The cabinet at its weekly meeting was understood to have tentatively approved the sending of two of its internationalists to distant European capitals to further the plans for consolidating peace.

While no official statement was forthcoming after the cabinet's session, well-informed political circles said the government had approved plans for Sir John Simon, foreign secretary, and Capt. Anthony Eden, lord privy seal, to go to Moscow, Warsaw and Praha after they visited Berlin.

Government quarters admitted an informal invitation from Moscow had been well received, and it was expected an official announcement shortly would confirm the report direct contact with Soviet leaders would take place.

Impelling the government to that action was its determination to leave no stone unturned in an effort to bring about an inclusive European settlement which would end tension on all frontiers.

Impelling the government to that action was its determination to leave no stone unturned in an effort to bring about an inclusive European settlement which would end tension on all frontiers.

SURGICAL TRIUMPH

Dr. Claude S. Beck, above, performed one of the first operations on record for the relief of angina pectoris, a heart ailment which hitherto has been considered incurable. The operation was performed at Lakeside Hospital, Cleveland.

Receive Recognition

Three Medals Are Awarded By Royal Society Of Canada

Ottawa.—Secretary Lawrence J. Burpee of the Royal Society of Canada, announced award of three of the society's medals to a Montrealer and two Ottawans. The awards are made annually.

Dr. Edward Montpetit of Montreal University, prominent French-language Canadian writer, was awarded the Lorne Pierce medal for literature. Dr. F. T. Shutt, former chemist at the Dominion experimental farm here, was awarded the Sir Joseph Flavelle medal for outstanding achievement in science. Brig.-Gen. E. A. Cruikshank, widely known student of the war of 1812, was awarded the Tyrrell medal for history.

Reform Measures

Economic Advisory Council To Be Set Up

Ottawa.—Legislation to set up an economic advisory council as forecast in the speech from the throne is expected to be the next reform measure Prime Minister R. B. Bennett will introduce in parliament, it was learned here. The bill was practically ready, it was stated, but decision upon the three or more who will make up the personnel of the council had not been reached.

The board will act in the same capacity on matters dealing with economic progress of the Dominion as the national research council acts for scientific problems.

Jurisdiction Ended

Saarbruecken.—League of Nations jurisdiction over the Saar territory ended at 11:30 a.m. Feb. 28, it was announced. Geoffrey G. Knox, president of the governing commission, turned police authority over to Reich representatives.

Court Martial Conviction

Captain Of Cruiser Renown Is Tried On Charge Of Negligence

Portsmouth, England.—Capt. H. R. Sawbridge, of the battle cruiser, Renown, was convicted by court martial on a charge of negligence following collision of the Renown with the Hood.

The charge, that he caused to be "hazarded" the two giant war vessels during manœuvres off the Spanish coast in January, was similar to that on which Rear-Admiral Sidney Bailey, commander of the battle cruiser squadron, was acquitted. A third courtmartial is yet to be held, the trial of Capt. F. T. B. Tower, of the Hood, on which the rear-admiral's flag flew.

The court ruled that he be dismissed from his ship. The deputy judge advocate announced that the charge had been proved.

Relief Standards Urged

Plan Made Public By Canadian Council On Welfare

Ottawa.—Establishment of a federal advisory committee on unemployment relief which would set standards and principles of administration to which provinces would be bound was recommended in a national relief plan made public by the Canadian Council on Child and Family Welfare.

Provinces failing to observe the standards laid down by such a committee would be refused financial assistance from the federal authority. The outline presented by the council described the situation as urgent in view of the fact present agreements expire at the end of March while there were, the statement declared, 1,350,000 persons receiving unemployment relief.

Lepers Killed By Chinese

Brutal Massacre By Villagers To Stamp Out Disease

Hong Kong, China.—The inhabitants of the fishing village of Wai-chow, which is on an island in the delta of the Pearl river, have risen en masse and freed their little island of lepers by carrying out a brutal massacre of the 24 sufferers from the disease who lived nearby.

The lepers did not mingle with the other people on the island, but lived in a small settlement of their own. After the massacre, the leper settlement was burned to the ground.

MAKES VIGOROUS DEFENCE AGAINST HIS MANY CRITICS

Doncaster, Yorkshire, Eng.—Prime Minister Ramsay MacDonald said here he will resign whenever he feels he can no longer "pull my full weight in the boat."

Defending himself and his National government against its critics, the prime minister said:

"So far as I'm concerned, I hold the position I do at the wish of my colleagues.

"When the moment comes they find my services too dearly bought, or when . . . myself for one reason or another—and unfortunately there are many—are no longer satisfied that I can pull my full weight in the boat, I shall require nobody's advice to make up my mind what my duty is."

Mr. MacDonald disclosed the government is actively after financial speculators whose scandals, he said, "are besmirching the financial probity of this country and damaging our credit in the eyes of the world."

(The government's opponents in parliament have demanded an investigation of the recent crash of an attempted pool in pepper, which forced three firms to the wall.)

Replying to charges the government has been shielding speculators, Mr. MacDonald said there was no truth in such statements. The government is not shielding anyone, he asserted, "but the government is not going into a panic."

The prime minister also denied former prime minister David Lloyd George's charges that the government had turned down his "new deal."

"Mr. Lloyd George said 'I am going to produce from time to time the plans themselves—actual plans,'" Mr. MacDonald said. "I'm still waiting. Until I see the plan I can neither accept it nor reject it. I certainly have not rejected it yet."

He asserted that the cabinet was willing to look at any plan any man has which is a suggestion of the unemployment problem.

TO ESTABLISH A BOARD TO DIRECT GRAIN MARKETING

Ottawa.—The government has revealed it hopes to establish a board to direct the whole policy of grain marketing in Canada, domestic and foreign, to advise producers of probable world requirements of wheat and feed grains, to obtain efficient regulations for distribution of grains in Canada.

It was made known efforts to stabilize export wheat marketing will be only part of the board's job which will include powers to buy and sell, store and ship.

Notice of motion on the House of Commons order paper that the board would be proposed to parliament contained no information regarding details of the plan and none was forthcoming from official circles. It was understood, however, that the question of rail rates on feed grains for domestic consumption will be closely allied with its activities.

According to the best information available the board will be given wide general powers to regulate the grain industry although it was considered possible no drastic change would be made at once in the present marketing machinery.

Saarlanders Celebrate

League Of Nations Give Up Control Of Rich Coal Area

Saarbruecken.—Hilarious Saarlanders staged a second new year's celebration in the early morning hours to welcome March 1—the day the Saar is officially turned back to Germany by the League of Nations. From midnight on they hailed a "new and better time" with beer, toasts, victory bells, frantic shouts of glee and patriotic songs.

Most Saarlanders greeted the day of return in cafes. Promptly at midnight the patrons arose with upraised steins and gave a lusty threefold "victory heil" followed by a Hitler salute.

France and the League of Nations gave up control of the rich Saar coal basin to close one of the most hotly-contested chapters of the Versailles treaty.

To a thunderous "hell!" from 300,000 throats, the French tricolor was hauled down from over the administration of the Saar domain coal mines. This preceded the final ceremony of handing over the territory.

As the flag was removed, staff and all, deep silence fell and it continued for only a few moments. The cheering arms at the pithed joined factory whistles in shrilling a note of triumph. From the sea of faces massed around the administration building Nazi flags were thrust into prominence and hands were raised in the Nazi salute.

Revived By Physician

Man "Dead" For Seven Minutes Brought Back To Life

Washington.—After having been "dead" for seven minutes, Vincent Montesi, 63-year-old former chief in the Brazilian embassy here, was revived by a Washington physician and is reported doing nicely.

It was learned Montesi's heart and breathing ceased for seven minutes during an operation for kidney trouble which he underwent here. He was revived by Dr. Frederick Reuter, who reached through an incision in the man's body and gently massaged the heart until it began to beat again. Montesi said the whole experience is "just a blank."

Prepare Election Lists

Government Printing Bureau Will Have Lists In Type By April 1

Ottawa.—The election lists will be in type at the government printing bureau by April 1. Secretary of State C. H. Cahan told the House of Commons. Most of the city lists have been printed already and delivered to the franchise commissioner.

The lists were prepared by enumerators at the country-wide census several months ago and will be used at the next election if it is held before or shortly after April 15. On that date there must be a revision of the lists bringing them up to date.

False Relief Recipients

Three Rivers, Que.—At least 50,000 of the 180,000 people in Montreal are false unemployed, drawing their relief cheques illegally and costing taxpayers about \$300,000 a month, Aid. Leon Trempeau, Montreal city council member, told members of the Jeune Commerce de Trois Rivières.

A Peace-Time Explosive

New Substance Outdoes TNT But Is Safe As Water

The power of TNT and the safety of water are sacrificed by natural scientists to nitro-ammonia, or "nitramon," the new explosive announced by the du Pont Company, Wilmington, Del.

The new substance, white and somewhat harder than a tallow candle, is 20 per cent stronger than TNT, but so far nothing except a "shot" of dynamite has been found which will cause it to detonate.

The chemists who made this new safety explosive were insistent that it could not "properly be called an explosive," because it was no different from anything previously known. But they said they had not coined any new word for classification.

The du Pont engineers developed the new stuff in an effort to take the hazards out of industrial blasting in quarries and "strippings," where explosives are used to break up rocks or coal veins.

The nitro-ammonia has been pounded with tripammers, bored with red-hot irons, put in the blow torch and shot with high-power rifle bullets without detonating.

It is said to be strictly a peace-time explosive. Although they have not tried it, some of the engineers are confident that they could fire the stuff in the form of a projectile out of a big gun without causing it to explode.

The base of the explosive is nitrate of ammonia, a substance common in dynamite. This compound is "restrained" by the addition of a special carbon mixture, the nature of which was not made public.

After the dynamite cartridge starts the action, this carbon compound will begin "reacting" with the oxygen in the nitro-ammonia. This reaction, the technicians explain, when once started is very rapid and constitutes the energy of the resulting explosion.

New Race Of Ants

Species Native To Europe Is Invading United States

American entomologists report that the kind of ants now chiefly inhabiting the haunts of ants in the United States are pavement ants from Europe.

The first pavement ants were only noticed in the states a few years ago. The original settlers probably came over in a ship among cargo carrying soil or vegetation of some kind. There may only have been a few of them, but ants multiply at a tremendous rate and now there are billions. And those billions will breed more billions. They are more aggressive than the native ants, and wage war on the natives and kill them. Strangely enough, no pavement ants have yet been found in Canada.

These European species are no more harmful to man than the natives are. The United States may find its own ants comparatively supplanted in the near future, "bug" men say. That means that the ants of American people; they will still have ants in the pie at picnics.—St. Thomas Times-Journal.

Would Make A Difference

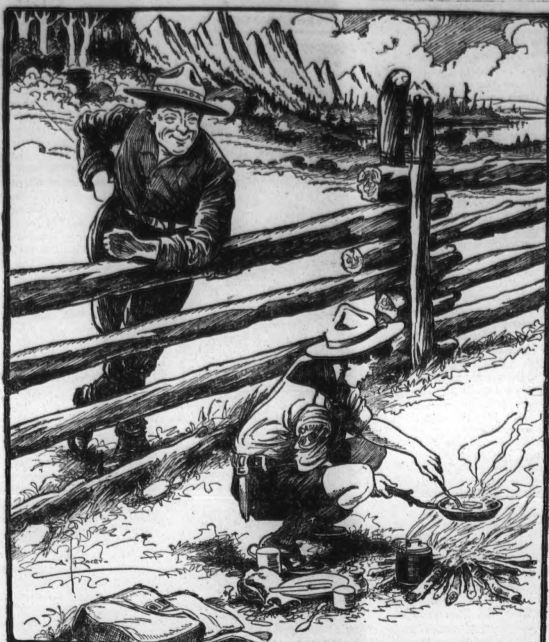

Idea For Chimneys Might Be Applied To People

Five years ago I visited a town where the smoke from many chimneys beguiled streets and houses, even penetrating into the larders of the lowly housewives. Last year I revisited that town. Now no smoke is to be seen, and the paint-work everywhere is spruce and clean. "What's made this difference?" I asked of my hostess. "Oh, they've got an invention now which makes the chimneys consume their own smoke," was the immediate reply. How much brighter the world would be if all people consumed their anger, grumbling, and petty criticisms.

More than 75 different diseases may be transmitted to mankind by animals, including cows, dogs, pigs, rats, horses, sheep, goats, wild rabbits, squirrels, rats, parrots, clams, fish, oysters and a multitude of insects.

London is to have a big hail as a flower and vegetable market, a cost of \$10,000,000, at Spitalfields. It will be three times as large as Covent Garden and the biggest vegetable market in the world.

By a new process a fabric can be made so resembling Persian lamb skin that it is claimed only close examination shows the difference.

FARMER CANADA: Great life, eh, young fellow? Too bad we haven't a hundred thousand more such healthy-minded lads, away from town, learning this he-man Scout stuff!

Colors For Flags

Practically Every One Has Been Used Excepting Brown

Red, white and blue, colors that come into the minds of English people whenever flags are mentioned, are the most popular hues. It happens, for the flags of the world. Red is used more generally than any other color in flag-making, followed in order by white and blue. Next in order, but much less popular than the three leaders, are yellow, green and black. Orange which appears in the banners of three countries, about exhausts the colors used in the world's flags. One country (Spain) uses purple. Brown does not appear on any national flag.

Astronomical devices are favorites of flag-makers. Stars are used by many countries and there are suns and moons, the latter usually in the form of crescents. Brazil makes use of a circle of the firmament showing the Southern Cross and neighboring stars and the Southern Cross also appears in the flags of Australia and New Zealand. Alaska has placed on its flag the Great Dipper and Pole Star.

Other countries use characteristic symbols—Afghanistan, a mosque; Cambodia, an Eastern temple; the Republic of Lebanon, a cedar; the Papal State, crossed keys and triple crown; Germany, a swastika; Siam, white elephant; and the Soviet Union, a hammer and sickle. Tibet shows the sun rising over a snow mountain.

To Achieve Success

He has achieved success who has lived well, laughed often, and loved much; who has gained the respect of intelligent men and the love of little children; who has filled his niche and accomplished his task, whether by an improved poppy, a perfect poem, or a rescued soul; who has never lacked appreciation of earth's beauty or failed to express it; who has always looked for the best in others and given the best he had; whose life was an inspiration and whose memory a benediction.

Amateur Radio Certificates

The radio branch of the marine department announced the following had been granted amateur radio certificates: J. Stevenson, Louis Alta; C. E. Brindley, Edmonton; C. M. Wilson, Fort Alberni, B.C.; J. A. Cross, Vancouver; W. J. Gillespie, Fort William, Ont.; N. Whitaker, Maymont, Sask.; W. J. Sharp, Regina, and J. A. Spink, Saskatoon, Sask.

Plan Scout Pageant

For the visit here in April of Lord and Lady Baden-Powell, scouts and guides of southern Alberta are planning a pageant which will show the part international scouting and guiding is doing to inculcate ideals of peace and brotherhood among the youth of 97 nations. 2088

Saskatchewan Wheat Pool

Pool Elevators Limited Claims To Be Largest Concern Of Its Kind In Existence

Saskatchewan Pool Elevators Limited, which claims to be the largest concern of its kind in existence, celebrated its tenth birthday recently. Incorporated on February 13, 1925, with a capital of \$100,000, the company began operations with no facilities of any kind beyond a small loading plant near the Montana border. To-day it has 1,068 country elevators, all owned by the farmers' organization, and five terminals, of which four are owned and one leased.

During the ten-year period to January 31, 1935, Saskatchewan Pool Elevator has handled 147,107,000 bushels of all grains through its country elevator system, and 52,662,000 bushels of platform loadings, making a total of 798,769,000 bushels.

Used Postage Stamps

Philatelic Agency Of Post Office Is Highly Profitable

The philatelic agency of the post office department is a highly profitable venture, according to figures on revenues and cost produced in the House of Commons. Last fiscal year the agency's revenue was \$54,813, while operating cost was \$9,828.

The post office department does not, as a matter of general practice, sell used postage stamps. Postmaster General Arthur Sauve told Col. W. F. Mulock (Liberal, North York). Occasional spare time of employees, however, was utilized in salvaging a small proportion of cancelled stamps reaching the department through official channels. These were sold in limited quantities to individual applicants.

Seeking Fisheries Treaty

To Preserve Friendly Relations Between Great Britain And Norway

Disputes about the boundary of the territorial waters of Norway has long been disturbing friendly relations between that country and other nations, especially Great Britain. When an international convention in 1882 agreed to a definition of what were those territorial waters in which it would be illegal for a foreign vessel to fish, Norway declined to participate. Norway fixed its own limits and these did not always suit the trawlers who went to the vicinity of the Norway coast to take fish. In recent years friction has been growing and a new fisheries treaty is being urged in many quarters. Especially is a treaty between Norway and Great Britain considered imperative if cordial relations are to be preserved.

Looking Into Past

People Doing It Constantly Take No Joy In Life

There are some people who ride all through the journey of life with their backs to the horses. They are always looking into the past. All the worth of things is there. They are for ever talking about the good old times, and how different things were when they were young. There is no romance in the world now, and no heroism. The very winners and winners are nothing to what they used to be; in fact, life is altogether on a small, commonplace scale. Now that is a miserable sort of thing; it brings a kind of paralysing chill over the life and petrifies the natural spring of joy that should be ever leaping up to meet the fresh new mercuries that the days keep bringing.—Brooke Hereford.

Better Horse Days

Upward Trend Is Shown In Demand For Horses In Canada

From a horse's point of view, the invasion of motor power vehicles into his particular sphere of endeavor has been most distressing. Unable to compete with the speed and convenience of automobiles as a mode of transportation, the horse was quite naturally faced with an unemployment situation which became even more acute with the adoption of power machinery on farms, and as a result the horse population of the Dominion has greatly declined during the last thirteen years. In 1921 Canada's horse population numbered 3,610,494; in 1931 it was 3,113,909; in June, 1933, it was 2,984,100, and in June, 1934, it was 2,933,400.

Despite the continued decline in recent years, better days are ahead for "Old Dobbin," and reports indicate an upward trend in both horse population and demand. A most encouraging factor is the distinct increase in breeding activities during the year. Horse breeders' clubs in the prairie provinces numbered 166, an increase of 32.8 per cent over the number in operation in 1933, and a number of districts reported inability to secure satisfactory stallions. Imports of bred males and females for breeding purposes show a marked increase over 1933. Fifty purebred stallions and mares of the draft breeds were imported in 1933, and this number was more than doubled in 1934.

The export trade in draft horses was much more active in 1934 than for a number of years. An increased number of high class draft geldings were sold to buyers from the United States, where there is a marked scarcity. Two shipments were made to Great Britain, one of grade Clydesdale geldings, and one of geldings of Percheron type. A carload of horses bred from purebred sires of the hunter type was sent to Barbados for constabulary work, following a satisfactory trial shipment taken to the West Indies last year. Negotiations are at present under way for supplying five hundred unbroken western range horses to China, and a demand is developing in Australia for purebred Clydesdales and Percherons from Canada for breeding purposes.

It is of which goes to indicate that to some extent the horse is being reinstated in his own field of usefulness, and while he may not prevail to the same extent as in former years there should be a marked improvement in his quality due to more exacting breeding requirements.

Wool Made From Glass

Swedish Manufacturer Developed Process Of Making Fine Threads

Glass is made into wool by a process developed by a Swedish manufacturer. Molten glass flows down upon a disk which rotates with great velocity. By action of the centrifugal force, the glass is disintegrated into a mass of extremely fine threads. A current of air is blown downward around the edge of the rotating disk carrying the formed glass wool down upon a cutter and transport apparatus, by means of which the product is continuously carried away for further working. The fineness of the glass threads can be controlled within certain limits by regulating the temperature of the molten glass and the amount of glass fed upon the rotating disk per unit of time.

Nothing To Boast About

Psychologist Says Women Are Better Liars Than Men

As the result of a test of the lying abilities of 1,000 subjects of both sexes, Doctor W. Hepper, a psychologist, concludes that women are better liars than men. According to Doctor Hepper's investigation, 20 per cent more women than men confessed blandly to wriggling out of difficulties by the use of half-truths. Dr. Hepper's tests also disclosed the following facts. The typical masculine form of deceit is a bold, look-you-straight-in-the-eye proclamation of absolute untruth. On the other hand, women lie far more artfully and subtly. Men are too blunt and straightforward in their attempts at deception.

Meant Big Saving

Defending the government's cattle disposal policy last fall when 10,000 head from the drought areas were moved to Alberta markets, Hon. B. G. Giddens, minister of agriculture, declared that a net saving of \$100,000 to the province had resulted.

Exploring Wild Country

English Girl Going To Liberia To Study Slavery

Barbara Greene, 28, "tall, dark and beautiful," the London papers say, left London the other day to explore a wild country where no white man has ever trod before—the depths of the hinterland of Liberia (the negro republic of Africa), a land of cannibalism and witchcraft. Miss Greene is accompanying her cousin, Graham Greene, the novelist, to investigate the appalling conditions of slavery and savagery among the tribes in the jungle. This is her debut as explorer, says an interviewer. "I'm ashamed to confess I've never been on so much as a caravan trip before," Miss Greene said. "The jungle will be rather a change for me."

She is not alarmed at the prospect of six months' trek through entirely unknown country. They will land at Freetown in Sierra Leone and take the railway as far as it goes up country. In Liberia there are no railways, no towns; the two cousins will trek through—Miss Greene's kit is riding breeches and riding boots—to Monrovia, the capital of Liberia, on the West Coast.

"It's a pretty crazy idea," said Miss Greene cheerfully. "But it's comforting to know that cannibals aren't eating white people; we're far too stringy!"

The real danger will come from fever: there has been an outbreak of yellow fever in Liberia, which has the unhealthy climate in the world, and has no hospitals or doctors. "Except," as Miss Greene says calmly, "withdoctors."

Sir John Harris, secretary to the Anti-Slavery and Aborigines Protection Society, who has travelled very widely in Africa, gave the young explorer advice before they sailed. "It will be an extraordinarily interesting trip," he said. "I should think they ought to get through, and their information, if they do, will be very valuable."

"They are going into the hinterland farther than any white man has gone before, as far as we know. The negro tribes, which have been savagely oppressed, may welcome them—but you never can tell."

Trans-Atlantic Air Service

Huge Hydroplane To Be Used To Assist Take-Off In Mid-Air For Cabin Plane

A huge hydroplane intended to provide a take-off in mid-air for a smaller cabin plane was reported envisaged by British aviation circles as a means of providing trans-Atlantic air service.

Officials of Imperial Airways were said to have ordered construction of two novel type planes at a Rochester, Kent, factory. If experiments next summer are successful, officials were quoted as saying, the government would provide necessary financial aid for a regular service.

The projected hydroplane would be equipped with a platform on its wings. It would fly aloft, carrying a four-motored 1,000-h.p. cabin plane. The latter would take off from mid-air under its own power to cross the ocean, the hydroplane returning to land again.

The plan was devised because the smaller plane normally could not take off from the ground with enough fuel to cross the Atlantic.

Most Intense Cold

Reaches One Five Thousandths Degree Above Zero

Prof. W. J. De Haas of the university at Breda, The Netherlands, who reported reaching a temperature of one-five thousandths of a degree above absolute zero in a laboratory experiment, said: "It does not believe absolute zero will ever be reached."

"The present result can only be bettered by the use of other and still unknown magnetic substances," he explained.

The result improves the temperature found by Prof. Keason, who had seven-tenths above zero. The vacuum and cold obtained were more perfect than that in interstellar space.

Leyden regards Prof. De Haas as the nearest man to absolute zero. His closest competitors are believed in Breda to be Prof. Glaugue at Berkeley, Cal., and Prof. Charkow of Berlin and Oxford.

Magistrate—"You say defendant struck you three times and knocked you down?"

Witness—"He did, sir."

"And what did you do then?"

"I asked him if he'd finished."

Bill: "What is the hardest thing you ever did?"

Will: "Make ten easy payments."

THE TENDERFOOT

By GEORGE B. RODNEY

Author of "The Coronado Trail", "The Canyon Trail", Etc.

SYNOPSIS

"You've fallen heir to a half-share in plenty of trouble," the lawyer told Gerald Keene. "The Broken Spur has been systematically looting the ranch, and old Joe Carr, your partner, is drinking himself into ruin."

Dad Kane, desert rat and luckless prospector till now returns to tell Dustin and Spike Goddard who had grubstaked him, of his discovery of a rich gold mine, and shows samples of the ore.

Dustin unexpectedly comes along while Stone and Edith are riding fence, and seeing them, stops and talks to Edith. He mentions their dispute could be settled by marrying him, and Edith refuses his proposal with remarks that make Dustin furious. He insults Stone, who promptly throws him into a pool of water.

Stone tells Crewe, his foreman, about his meeting with Dustin. Stone and Crewe go to see a man named Edith. He mentions their dispute could be settled by marrying him, and Edith refuses his proposal with remarks that make Dustin furious. He insults Stone, who promptly throws him into a pool of water.

(Now Go On With The Story)

CHAPTER XIII.—Continued

"Wait a bit. I've got a better plan than that." . . . Dustin's grin was the grin of a dog who says "Wait! I mean that it intends to bite." "Well, if I had sprung that on Joe Carr, he'd simply wait till this Gerald Keene, his partner, turns up. Young Keene might have the money. If he has, then old Carr would get out of my clutches. See? Keene would sure help Carr meet that note. He'd sure

Makes Legal Oath

MR. T. E. SEYFFERT

Who tells a sylvan statement how Fruit-a-tives brought her lasting recovery from chronic constipation. Mrs. Seyffert, who resides at 70 Seneca Street, Toronto, is so happy to be well again that she has given a statement of her experience and made it under oath before a notary to convince you of its absolute truth. Mrs. Seyffert says—"I had injury I received at childbirth resulted in continued constipation. For years I was unable to enjoy life. My complexion was yellow. I started taking Fruit-a-tives and now I am up at 6:00 a.m. every morning doing my own housework. My complexion is clear and I am quite regular."

Copy of Mrs. Seyffert's complete sworn statement will be sent on request. Write Fruit-a-tives Ltd., Ottawa, Canada. Fruit-a-tives—See and See EVERYWHERE

to see him at once. Not a word more than that."

Spike went and ten minutes later Peyotl dropped his hat at the door and came shamblingly into the room. Dustin looked up from some pretended work at the desk.

"It's a good thing for you, Peyotl, that you came at once," he said. "I'm sorry for you, but I don't see how I can help you. . . . Remember old Dad Kane, Peyotl?"

"For heaven's sake lay off that, Mister Sam. . . . The man's arm flung up to guard before his eyes and he shivered as though with an ague. "I ain't slept a wink since I came back. . . . I'd never get sleep if it wasn't for . . . for . . . you know what. . . . He tugged a red-and-green cigarette packet from his pocket.

Dustin snatched it from him, tore out four cigarettes and gave them to him, and thrust the package into his desk drawer.

"You damned fool. I've told you a dozen times not to get any of these things except what I give you. I give you your full allowance. Just suppose you take too many of these and talk too much. You know what'll happen. You'll be hung as high as Haman."

Peyotl looked dazed. He had looked for a coin and perhaps an errand and he found a threat that he only half understood. He could not guess what was coming, but he knew that he was on the verge of being violently ill. His stomach was queasy. Man, born of woman, cannot smoke unlimited Peyotl cigarettes to kill the memory of a murder that he never committed and still carry himself like a free man. Peyotl squirmed and Dustin gladly noted it.

"I wish I could help you, Peyotl," he said. "But I don't see how I can."

"What's the matter, boss? What's come up?"

"You know damned well what you did. The question is how're you going to keep the world from knowing what you did, too? I'll hate to see you at the end of a rope, Peyotl."

Peyotl gulped audibly and sat down. He remembered Wills very well. Caught while in the very act of changing brands on two horses of the Cross Keys stock, Wills had been given two hours to confess his sin. The time had been wholly insufficient and Wills had gone to some questionable place with a larriat about his neck. Peyotl remembered seeing the long body swinging in the wind under a giant live oak while a yellow-hammer and two woodpeckers hammered cheerfully above him. He had never forgotten it and Dustin knew it.

"You see, Peyotl, it's this way. When you killed old man Kane, we thought he was just an old desert rat who had no friends. It seems we were wrong. He had some friends back East. He had a nephew. His name is Gerald Kane or Keene or something like that. Anyhow old man Kane must have written him that he had found a gold mine. This nephew telegraphed that he will be out here to-morrow night to look up his uncle. You know what that means. Every one knows that I've been grub-stakin' old man Kane. They'll come to me first of all. If they ask me any questions, Peyotl, you can see that I've got to tell 'em the truth. I'll willin' to help you all I can, Peyotl, but not to the extent of perjury. Of course I know just about how it was. . . . You smoked that damned stuff that I've told you to leave alone. You had a bad dream and you got into a doped row with old man Kane and killed him."

Peyotl shuddered. "Mexico ain't so far away," he muttered. "They'd get you there. They extradite for murder in Mexico. I guess you've got to pay the bill, Peyotl. . . . If this man Gerald Kane turns up. . . ."

ARE YOU TROUBLED WITH NERVES?

Do you find it hard to go to sleep at night? Do you feel poorly rested in the morning, "jumpy" all day, and "ragged" by evening?

Then take Wincorin. Here's a delicious wine, not a drug, that soothes nerves as nothing else can; that helps you quickly to sleep and floods your whole being with vibrant new energy.

Wincorin brings you all the valuable elements of grapes combined with the highest grade beef and guaranteed malt extract. Almost as soon as you begin taking Wincorin, you feel wonderfully better. This is because Wincorin enriches your blood, soothes your nerves and creates lasting reserves of strength and energy.

Over 20,000 medical men have proved in practice the value of Wincorin in cases of nervousness, insomnia, anemia, debility and general indisposition. Get Wincorin from your drug store—Sole Agents: Harold F. Rimmer & Co. Ltd., Toronto.

He had suggested the answer even to a drug-dependent brain.

(To Be Continued)

McMurray Tar Sands

Denver Firm To Erect Separating Plant In Alberta

Hon. Thomas G. Murphy, minister of the Interior, revealed that the government had given permission to Denver, Colo., financial interests to erect in Alberta plants for separating bitumen from McMurray sands for refining the bitumen to obtain gasoline, fuel oil and asphalt products.

The permission, Mr. Murphy said, was an extension of a former agreement made with the Denver interests represented by Max Ball which had contained a "patent" plant in Toronto for preliminary experiments.

The minister added he understood the firm had proceeded with construction in Alberta of a separation plant as soon as weather conditions permitted work and that the separation plant would be followed by a refinery. All the works, he believed, would cost about \$250,000.

Mr. Murphy said the government will not spend any money on the scheme but that the company will be required to pay royalties for the privileges of working the sands.

Winds Kind To Pilot

Enable Canadian Airways Aviator To Make Flight Record

The gods that control tail winds, it seems, are keeping their eyes on Capt. Walter Gilbert, chief pilot of the Mackenzie river division of Canadian Airways, Ltd., and seeing that he is in his favor.

He flew north from McMurray to the head of the Mackenzie. He started back on the day following his arrival at Aklavik, and again found the winds in the right direction. This time, however, it was roaring along at 85 miles an hour, sending long streamers of snow off the hillslope.

With the aid of the tail wind, he made a flying time record of a little over eight hours from Aklavik to McMurray. On one stretch of 208 miles from Arctic Red River to Fort Good Hope, he was in the air for just an hour and five minutes in an aeroplane which has a cruising speed of 115 miles an hour.

THE RHYMING OPTIMIST

By Aline Michaelis

CLOSE ARIN

I have never met Joy
Walking down the street;
But I'd know the movements
Of her dancing feet.
She comes from some comely do, do,
Lightly as a cloud,
She would slip like sunbeams
Through the weaving crowd.

I have never heard Joy
Calling in my ear;
But I know her voice must
Ring like your do, dear,
With a silver cadence
Drooping far from mirth,
Sweeter than the sweetest
Music made on Earth!

Joy may be a pagan,
Joy may be a sprite,
Yet I know you share her
Infinite delight.
Since the day you came to
Dwell my heart within,
I have known that Joy and
You are close akin!

Mothers' Pensions

British Columbia To Increase Allowance By A Small Amount

Recipients of mothers' pensions will have their allowances increased by a small amount, it was stated in the British Columbia legislature by Mrs. Paul Smith (Lib. Vancouver-Burrard). It will be the first step in an upward scale and will be put into effect during the next six months, she said. The government had also decided that mothers with only one child should be eligible for pensions. Although the act provided for the eligibility of practice for years had been to exclude them from benefits.

Discover Old Coins

Treasure Worth \$5,000 Is Unearthed In Pasture
At Dorchester, Eng., farmer George Chell's cattle are getting extra-fine fodder these days. While grazing the other day, the cattle kicked up a half dozen gold coins which started the farmer digging in his pasture. He unearthed more than a hundred coins dating back 300 years. The treasure, worth about \$5,000, is believed to have been buried during the reign of the Stuarts. 2088.

TRY FASTER WAY TO RELIEVE A COLD

1. Take 2 Aspirin tablets.

2. Drink full glass of water. Repeat treatment in 3 hours.

3. If throat is sore, gargle with a glass of water and gargle. This eases the soreness in your throat almost instantly.

Discovery Bringing

Almost Instant Relief to Millions

Follow Simple Directions:

When you have a cold, remember the simple treatment pictured here . . . prescribed by doctors as the quick, safe way.

Rebels are amazing. Ache and distress go immediately. Because of Aspirin's quick-disintegrating property, Aspirin "takes hold"—almost instantly. Your cold is relieved—"quick as you caught it!"

All you do is take Aspirin and drink plenty of water. Do this every 2 to 4 hours the first day—less often afterward . . . if throat is sore, the Aspirin gargle will ease it in as little as 2 minutes.

Ask your doctor about this. And be sure you get ASPIRIN when you buy. It is made in Canada and all druggists have it. Look for the name Bayer in the form of a cross on every Aspirin tablet. Aspirin is the trade mark of the Bayer Company, Limited.

DOES NOT HARM THE HEART

Would Have Cheque Framed

Alberta Farmer Receives Nineteen Cents In Payment For Cow

One farmer in Alberta has an idea of how to teach his children what hard times mean. He is a neighbor of G. G. Coote, United Farmer member for Macleod. Mr. Coote told about him in the House of Commons.

The farmer sent a cow to the Calgary market and after paying all charges was told his net return would be 19 cents. The agent who sold the cow received 75 cents commission. The charge for the hay the cow ate at the market was 35 cents. He was asked to call in for his money as the amount was too small to pay by cheque but the farmer wanted a cheque.

He said he proposed to have it framed so if at some time in the future his son complained of low prices he could show him what really low prices were.

Foot And Mouth Disease

Canada And South Africa Only Countries Free From This Blight

Canada and the Union of South Africa were said to be the only countries free from the blight of foot and mouth disease, during an agricultural debate in the British House of Commons. Captain Frank Helgers, Conservative, who farms more than 1,000 acres in west Suffolk, and is a member of the Friesian Cattle Society, said the society had searched the world over for countries free from the disease, and Canada and South Africa were practically the only ones they had found.

All other countries were spending money in research on the disease and were failing to find a remedy, he added.

Long hair was worn by Buffalo Bill and the other Indian fighters as a matter of honor. They believed that their Indian captor was entitled to a respectable scalplock if he captured them.

Little Helps For This Week

"I have learned in whatsoever state I am therewith to be content." Philipians 4:2.

No longer forward or behind in hope or fear. But grateful, like the good find, The best of now and here. —J. G. Whittier.

If we wish to gain contentment we might try such rules as these: Allow thyself to complain of nothing, not even the weather. Never picture thyself to thyself under any circumstances in which thou art not. Never compare thine own lot with that of another.

Never dwell on the morrow. Remember it is God's, not thine. The heaviest part of sorrow is often to look forward to it. "The Lord will provide." Never allow thyself to dwell on the wish that things were otherwise than they were. God Almighty loves thee better and more wisely than thou dost thyself.

Two Most Outstanding

Competition In London Names Roosevelt And Madame Curie

An American, President Roosevelt, and a French woman, Madame Curie, were chosen by the British public as the outstanding man and woman of 1934 in a competition conducted by a London newspaper.

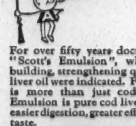

By a coincidence, both Mme. Curie and Marie Dressler, who was in second place in the women's list, died during the year. In second place among the men was Jan Smuts, former prime minister of South Africa and rector of St. Andrews University, Scotland.

Woolen roads are no joke—some road facings are being made of wool and tar mixtures.

Growers in Scotland will ask parliament to regulate the marketing of raspberries.

Thursday, March 7th., 1935

Local News

It was 22 below this morning! Guy Wickerson has bought the old Patmore farm, east of town.

A. A. Hall has rented his farm to Mr. Cch of Three Hills.

The annual meeting of the East Community hall will be held at hall on Friday night.

Mrs. J. R. Gilchrist and daughter Lois of Barons, are visiting friends in town this week.

Chris. Christanson has purchased a new Ford V8 coach from Les. Farr, Ford dealer of Airside.

Constable R. C. Fenn or Irticana was renewing acquaintances in town on Sunday.

Hughie McIntyre was a business visitor to Airside on Tuesday. He reports that Airside is dead.

Mrs. Griffiths was today surprised by a number of friends, the occasion being her umteenth birthday.

The bills for the Crossfield Community Sale will be printed in a few days, list what you desire to sell at the Chronicle office.

Mr. and Mrs. Jarman and daughters of Calgary were Sunday visitors at the home of Mr. and Mrs. A. A. Hall.

U. F. W. A. annual Calico Ball will be held in the East Community Hall on March 15th. Music by Hayden's Old Time Orchestra.

Miss Jean Williams of Toronto, arrived here on Tuesday night to visit her parents, Dr. and Mrs. D. W. Williams.

Some thirty from the Crossfield district attended the Old-Timers round-up at Acme on Friday night. A wonderful time was had by all.

A delightful dinner party was held at the home of Mr. and Mrs. Fred Picuti on Sunday, in honor of the newlyweds, Mr. and Mrs. Wm. Cameron. Tables were laid for eight.

Mr. and Mrs. Burns, Mr. and Mrs. Stafford and Percy Willis, all of Turner Valley, were the guests of Mrs. Willis on Tuesday afternoon.

Mr. Jamieson of the Carstairs district has bought the A. L. Frisk farm. The deal between Frisk and Robert Ure fell through at the last minute.

Mr. and Mrs. P. C. Griffiths went down to Calgary on Friday, where they attended the annual banquet of St. David's Society. A grand time was had by all, but the genial L. Brockington was sadly missed.

Keep in mind the band concert, and dance by the Carstairs-Crossfield Band in the East Community Hall on Wed., March 20. Tickets for the concert may be purchased at the Chronicle office.

Rev. A. D. Currie, Geo. McLeod and E. Devins attended the Old-Timers entertainment and dance at Balzac on Friday night. Rev. Currie conveyed greetings from the Crossfield Old-Timers Association. A large crowd attended and a very enjoyable time is reported.

Mr. and Mrs. D. J. Hall entertained the Oneil Bridge Club on Wednesday evening. Seven tables were in play. First prizes were won by Mrs. W. Miller and Garnet Oneil; consolation prizes to Mrs. W. Hurt, and Win. Landymore. (Mr. Landymore received a building of the Chic Sale type.)

We have just learned that Mr. William Cameron and Miss Grace Riddell, two popular young people of this community, were quietly married a week or two ago. While the news is a bit stale, it does not stop us from wishing them a long and happy married life, and that Bill will drop around to our office with a small jug of Scotch so that we may give him our blessing.

CARSTAIRS CURLERS MAKE BIG CLEANUP

Crossfield's annual bonspiel came to a close Thursday night after three days of enjoyable curling. Rinks from Carstairs made a clean sweep of the trophies.

Citizens: 1. Donnelly, Carstairs; 2nd McCloy, Didsbury; 3rd Shantz Carstairs; 4th. Edmondson, Carstairs.
Distributors Event: 1st. Leisemer, Carstairs; 2nd. Donnelly, Carstairs; 3rd. McCloy, Didsbury; 4th. McMillan, Crossfield.

Consolation: 1st. Estes, Carstairs; 2nd. McCloy, 3. Becker, Crossfield; G. Purvis, Crossfield.
D. W. Carmichael, bonspiel secretary, is to be complimented on the very efficient manner in which the "spid was carried out. Not only was he successful in securing a good prize list, but he also made the draws and kept everything going along smoothly.

Glen Williams and Hughie McIntyre were two of the big shots who were unable to play in the bonspiel this year owing to business reasons. Glen is the outstanding curler of the local club, while R. B. (when in proper fettle) can roll louder than any two men, which is very essential in curling.

Curling Notes

Royal Hotel Competition
The inter rink competition for the Royal Hotel cup and four miniature cups, which was held up during the bonspiel is now being completed.

Carl Becker is leading the way with six wins, he has two games to play.

The results of recent games and the standing of rinks in the competition follow:

| | Won | Lost |
|----------------------|-----|------|
| Cameron 12, Stralo 8 | 6 | 0 |
| Becker..... | 6 | 1 |
| G. Williams..... | 3 | 1 |
| Purvis..... | 2 | 2 |
| McMillan..... | 4 | 3 |
| McRory..... | 3 | 4 |
| Carmichael..... | 2 | 5 |
| Cameron..... | 4 | 4 |
| Stralo..... | 2 | 4 |
| McCasill..... | 1 | 4 |

Two rinks from the North Hill Club of Calgary visited Crossfield on Wednesday playing four games in all. Crossfield picked off for themselves three wins.

After the finish of the night games, the ladies entertained at a sociable lunch.

Local skips were McMillan, McCasill, Carmichael and G. Williams. Calgary skips, Aitken and McChesney.

The Crossfield kids rink, skipped by Len Pullan took a fall out of the Dog Pound rink shipped by the Sultan of Swat Lake Parson on Monday evening. The score was 11 to 7.

Dog Pound—L. Parsons, M. Hoffman, R. R. Parsons, E. Hepper.

Crossfield—Len Pullan, Evan Gordon, Fred Heywood, Stan Miller.

What has appeared strange to us in view of the fact that the Government have been cutting expenditures to the bone in certain departments, is how they could possibly economize by putting a third man on the gravel truck working on the highway between Calgary and Didsbury, as was the case last summer.

This same job has been done for years by two men, and neither of them ever suffered from overwork. It has been told by men who have done this work that the third man on one of these trucks is just so much excess baggage.

Better can a few of these hangers-on in the Public Works Department and hire a few more School Inspectors.

Why has there been no skating during the past ten days? This is the question that skaters, especially those who bought season tickets want to know.

The Council made arrangements with W. Heywood to look after the rink for the season. If the Council made the agreement so that he could open the rink and close it when he wanted to, then the Council is to blame.

The ratemakers have spent a lot of money in rebuilding the rink, and when the weather is cold enough they expect to have skating. Those who bought season tickets this year figure they have been gipped.

Another year the Council would be well advised to hire one of these married men with families who are on relief to do the caretaking at the rink.

It has been suggested that if there is to be no more skating this year, it would be a wise plan to remove the light bulbs, as these make good but expensive targets for young boys with slingshots.

Letters to The Editor

Madden, Alta., Feb. 22
Crossfield Chronicle
I read with interest the report on the annual meeting of the ratemakers of Beaver Dam Municipality and it is quite concise and comprehensive.

However I do not like the implied criticism of the Council in the phrase "The balance sheet did not appear to reflect any serious attempt to curtail administration expense."

It would appear that whoever came to this conclusion, either went out of his way to look for something to object to or he does not know how to read a financial statement. Below are a few comparisons that will be enlightening

| Total | Reduction | per cent. |
|-----------------|------------|-----------|
| 1932 \$4,528.03 | | |
| 1933 3643.88 | \$1,184.15 | 26 1/2 |
| 1934 3407.97 | 236.91 | 6.47 |

Note that there was a reduction in 1934 of six and a half percent notwithstanding the drastic reduction of twenty-four and a half per cent in 1933.

Road Work
Year Total Exp. Supervision Supervisors
1932 \$7,256.26 438.00 6 per cent.
1933 6,508.62 361.75 5 1/2 per cent.
1934 11,285.68 431.00 3.8 per cent.

In 1932 the mill rate for Local Improvement Tax was seven mills, in 1933 and 1934 it was five mills.

The twenty-five school districts in the Municipality had an average mill rate in 1932 of nine mills. In 1933 of 7.5 mills and in 1934 of 6.1 1/2 mills.

I also might bring to attention the fact that in 1933 our administration costs were cut to the bone. Secretary-Treas. salary was cut from \$2,000.00 to \$1,500.00. Council fees from \$3.50 per meeting to \$2.50. Councillors mileage rate from ten cents to seven cents. This constituted a reduction of 37 1/2 per cent. In Secty-Treas. salary and the total amount paid councilmen was 23 per cent. less than in 1932.

I do not believe that there is a councilman who does not welcome constructive criticism and the records show that they can stand the gaff, but I am sure that the figures above are sufficient answer to any loose statements that may have been made.

Would appreciate it if you will publish this statement in the interests of a clear understanding of the situation.

Yours very truly
J. R. Giles.

Social Credit

Cochrane, Alta., Feb. 26

Editor Crossfield Chronicle

Dear Mr. Miller:
Could you please find space in your paper to publish this challenge for me, as I feel very sure that the people of your district are being misled by the Calgary speakers furthering (The Aberhart Scheme for Alberta). The arguments they use, in many instances are not based on actual facts.

During my visit to Crossfield I discussed the above mentioned scheme with many of its supporters. I found that many golden promises must of been made to them which it was an impossibility for any Government to fulfill. Therefore I challenge any local Aberhart supporter in the Crossfield district to debate in public the so-called Aberhart Social Credit Scheme for Alberta. At any time or place in your local district.

Thanking you very kindly, I am
Yours very truly,
P. H. Swanson
Box 276
Cochrane.

Reporter: "How is business, Johnson?"
N. A. Johnson: Well, it is quiet in the morning, and then falls off towards evening."

The Crossfield Legion will hold a Social Evening in the Masonic Hall on Wednesday, March 13. All Veterans and their friends cordially invited. Cards and dancing. Good music.

On Wednesday evening March 13th at 8 p.m. Rev. E. Longmire will give an illustrated address on "The Life of David Livingstone," the great African Missionary and Explorer, in the Rodney School. Views of the Rockies as seen from B. C. will also be shown. The ladies will serve lunch, and all are looking forward to a real social round-up. Silver collection.

The annual School Fair Concert will be held in the U.F.A. Hall on Friday, March 22nd.

The Council in preparing their budget for the year, should see that the Secretary is given a boost in salary.

Mr. Tredway has devoted the greatest part of his time during the past year to work in connection with the Village. He has spent a lot of time collecting arrears of taxes, and has produced results.

A good man is worthy of his hire—let the Council pay Tredway a good part of what he is worth.

Bill Rowney has bought a quarter section of raw land in the Madden district.

Important To Wheat Growers

Under wheat grading regulations coming into effect August 1st, 1935, the matter of purity of variety is one of primary importance.

Regardless of whether your wheat be Marquis, Garnet, Red "222" or any other variety, it is desirable from a marketing standpoint that it be uniform in type.

Excessive admixture one way or the other will be liable to grade penalties under the amendment to the Canada Grain Act.
